

The North Remembers

Part 1:

Kajon väkeä, sinen kukkia

**We are older than all the gods
the dead and the never-born.**

It all started on a chance encounter with starlingdb.org. I was doing some late-night historical research, blissfully unaware, when I found the site. “Nice?! And what a classic look! I’d better go check - these guys do no waste time on fucked-up bling, stalking users with cookies, and UI/UX meetings.” I thought and ventured in, browsing some words in North Asian languages. Then, I spotted this:

Proto-Yenisseian: *ʔɔksi (~x-)

Meaning: tree

Ket: ɔkś (Imb.)

Yug: oksi¹

Kottish: atči, *atče; (Бол.) ачи; acc. ачи (М., Сл., Срсл.), ач (Кл.)

Arin: ošče (М., Сл., Срсл., Кл.) "wood"; kus-ošče (М., Сл., Срсл., Кл.) "tree" (lit. "one tree"); otši (Лок.) "tree, wood", otšil "tree"

Comments: CCE 198. The Pump. form oksi (Срсл., Кл.) is in reality Yug. The key to the etymology is probably the Kottish paradigm: atči 'tree', plur. ak / ax, āx. The plural form here undoubtedly reflects PY *xaʔq 'tree, wood' (q.v.). One can therefore suppose that PY *xɔksi is a transformation of the original compound *xaʔq-sV or *xaʔq-xusa, lit. "one tree" (a compound analogous to *de-s 'eye' etc.) - cf. a similar later formation in Arin kus-ošče. The transformation of vocalism, however, is still to be explained. Werner 2, 50 <*(x)oksi / *(x)otsi>.

“Hmm! Heh heh, what a funny coincidence.”. And of course, only Finno-Permic people can appreciate this. “I wonder if I’d better run some words thru this database... what would I sense and think if I were transported back to Neolithic? Hmm.” But already, on the same page with “tree”, I instantly found

Proto-Yenisseian: *pōj

Meaning: fir tree

Proto-Yenisseian: *χV-ut-

Meaning: to climb (a tree, a mountain) (quite close to “kavuta” for you non-Finnish)

Proto-Yenisseian: *rəʔə (~-G-, -χ-, -p-)

Meaning: hoarfrost (on trees) (“riite”)

Amused, I thought “Perhaps it is sleepytime because these perceived connections are a bit too easy to find.” but continued instead. After a brief Neolithic RPG session with me & myself and also as a recent father, I found

Proto-Yenisseian: *sūli

Sino-Caucasian etymology: Sino-Caucasian etymology 

Meaning: hook (for a cradle)

Ket: súl⁴ (South.), North. sú:le⁴; pl. súln⁵

Yug: suʔl // su:^hl, pl. suləŋ⁵

Kottish: šūli, *šūle(i), pl. šūlaŋ, šūlān "Haken"

Comments: CCE 279. Werner 2, 213 <*suʔələ>.

And stared at the screen for a while. I did not even have to headstand to see it. It was there, phonetically almost a perfect match, with the meaning similarly off akin to “oksa”. Like a side cognate (if there were not a term before, there is now 8)). I spent a few hours in the database, completely off track from my previous quest.

Proto-Yeniseian: *kuł- (~ *g-)

Meaning: to slide down, to ski

kulkea / liukua

Proto-Yeniseian: *p[u]GVm-

Meaning: soft

pehmeä

Proto-Yeniseian: *pōqe

Meaning: deep

pohja

Proto-Yeniseian: *pɔʔɔle

Meaning: fat

pullea / pyylevä

Proto-Yeniseian: *pəl-se-

Meaning: to sew

parsia

Proto-Yeniseian: *poʔq

Meaning: excrements

paska

It was obvious that this shit needed more research. Next day, an article “Proto-Yeniseian Reconstructions, with Extra-Yeniseian Comparisons” - Sergei A. Starostin and Merritt Ruhlen. Uralic was mentioned nowhere, of course, but the angle was interesting. I thought “Hmm yeah you guys can go south. I have something else in mind. Let’s see if we can make a full circle, thanks for the tip!”

ALIVE *÷e÷te

ARMPIT *qoʔ-

BOIL (v.) *÷ëqan

CRY/SHOUT *(h)uxä-

DIE/DEATH *qò-

DRY *qäj-

EAT *siG-

just browsing for the lulz. “Not bad”, I said aloud to myself. “I need *more*. Where is my next fix?”

It was “Annotated Swadesh wordlists for the Yeniseian group (Yeniseian family).” by G. Starostin.

8. BLACK Proto-Yeniseian *tum- (1) Finnish: tumma

13. CLAW(NAIL) Ket îṇʸ {инь} (1), Yugh iḥ:nʸ (1), Kott halči:g ~ halčix (2), Proto-Yeniseian *ʔi:ne [*xi:ne] (1). Finnish: kynsi

14. CLOUD Ket 'asʸpulʸ {асьпуль} Finnish: pilvi

15. COLD Arin: Dulzon 1961: 187 (M., Dict., Pal., Kl.). Cf. also šil-tʷu 'it is cold', šil-tu 'cold (n.)', maybe also sol-ma 'frost' (Kh.) [Werner 2002: I: 162]. Finnish: kylmä

and then

22. EARTH Proto-Yeniseian *baʔŋ (1). Finnish: maa

I dropped the keyboard.

“ALL RIGHT NOW WHAT IS THIS?? WELL FUCK ME AND MARRY ME YOUNG. TIME TO GET SOME DICTIONARIES AND ALSO CHECK WHAT I ATE LAST NIGHT.”

(not only because

23. TO EAT - Ket $s\hat{1} \sim s\hat{y}\hat{y}$ {сий} (1) / =a ~ =0 (2), Yugh $si^h:y$ (1) / =a ~ =0 (2), Kott to:p-a:k-ŋ (3), Arin šau (1), Pumpokol sogo (1), Proto-Yeniseian *si:- (1). Finnish: syödä

whispered “Hey!!! What about me?? I was the next in line!!!”)

It turned out last night was fine and also others could see the row

22. EARTH Proto-Yeniseian *baʔŋ (1).

Fortunately, 23. was placated when I told it that I already knew it because we had met earlier. “Oh right! You mean THIS party?” it said. Confused, I continued on my digression.

After plumbing starlingdb.org, it was obvious that for the time being I had exhausted the Internet of easily available Yeniseian material. Getting physical dictionaries, on the other hand, was a bit difficult, since there were none existing – apart from a recently published “Comparative-Historical Yeniseian Dictionary” by Edward J. Vajda and Heinrich Werner. “What luck!” I thought. They were ~300 euros a piece. “So unlucky!” I thought. But there was one set of the books in an university library in Finland, because in Finland (for the most part...!) we think education is sexy.

Nobody knows beforehand what exactly will happen if the whole population gets a decent education. Some people that know better can of course self-importantly always ask “But, after all, what use is it?”, because ironically they do not know that the answer is “Why, sir, there is every probability that you will soon be able to tax it!”. But better not give *those* kind of people any ideas – they might have an unforeseen reaction to new things.

Finally, I had the books I needed. Thank you Finnish library system! I dove into a world of forgotten languages and for a native Uralic speaker the experience was perhaps the same as with the first native Indo-European speakers finding linguistic connections across the globe. I did not even have to jump through any scholarly IE hoops like

Borrowing from an *adstrate*... or Lallwort?

Borrowing from an *adstrate*... or Wanderwort?

Borrowing from an *adstrate*... or vrdhhi gerundive of an otherwise completely unattested stem?

I could just read stuff and later in the day or the next, or after a few weeks (or months...!), understand the connection. Some were obvious. Some were elusive. And some were not there after all. But let me tell you there were and are *plenty*.

Rather interestingly, scholarly FU hoops like

Etymology unknown... or onomatopoeic?

Etymology unknown... or sound-symbolic?

Etymology unknown... or borrowing from Proto-Germanic, but PG word lacks any PIE connection?

were useful to me as “Handy lists of words to check because obviously Finnish is so connected to universal truth that many words sound like the words really ARE in the idea world”. Especially amusing were a general class of “Words relating to winter, survival gear e.g. sleds, or natural phenomena, borrowed from Proto-Germanic”, of course, since those Proto-Germanics are unquestionably the top 1 ancient culture of winter handypersons. If they did not exist, the whole historical Indo-European dominance across every technocultural spectrum imaginable would have a

gaping omission in the postulated skill set! What a disturbing thought. Good that there is a culture that fixed this already over 2000 years ago.

Don't get me wrong, I love those southern weirdos as much as the next Germanic substrate hypothesist (hee hee) but have the linguists making these connections ever looked on a map combined with some weather data for past millennia??? Even my trusty German car *does not have mud flaps as a default* because who needs them in Germany, right? If I were in Germany and wanted to drive in shit, I would have to ram my car through the doors of a water purification plant. In Funland, this is achieved by going to buy everyday groceries.

I don't mind because the late PIEs told us that "Shit is good – you can grow stuff in it and then you can eat it – *no not like that!!!*" and eventually we got the hang of it. But why would they tell us a secret like that? Maybe they have an agenda and Proto-Sámi were right after all... but I digress again. Better paste some more "coincidental homonyms" because I heard it is practically impossible to have many of them betwixt unrelated languages. Everything counts in large amounts. More later when I have cloned myself so I have more time, ffs!

Group "THICC"

Proto-Uralic

***sake**

thick

dense

PY

***qogʌ < *qagʌ**

thick (viscous)

Proto-Finno-Permic

***šiketä**

Group "IRATE"

Proto-Uralic *kojwa birch	PY *qwaʹj birch bark
Finnish raivo fury rage wrath	PY *qʌjbes be angry
Finnish raivostuttaa to make someone furious	PY *qʌjbesqʌti to annoy to make somebody angry
Finnish tuhtua to get worked up to get irritated to get indignant	Ket qʌjatl mat of birch bark
Finnish tuohi birch bark	Ket qʌjatl mat of birch bark

Group "IAMSOGOODANDWONDERFUL"

Finnish pöyheä fluffy airy	PKY pʰʌŋbes to swell
Finnish pöyhkeä haughty uppity, snooty	PKY pʰʌŋtiu:ŋ splendid luxuriant

Group "IALSOLOVEANICESMELLINTHEMORNING"

Proto-Uralic *pućka shit	PY *pʰoʹq 'excrement' 'filth'	
Proto-Finnish *kärpähin *kärbäs	PKY *kʌqpʰʌn fly (insect)	
Proto-Finnish *kärtä smell of burning	PKY *kʌqtij to smoke	Finnish *kärytä to smoke / to smell like fire

Group “WHYWOULDICHECKANYSPECIESNAMESIAMLINGUISTNOTABIOLOGIST”

(Special mention here to Irina Nikolaeva for her splendid collection of Yukaghir species names, and also to team Vajda + Dumgit, who actually checked species names because Dumgit escaped from boarding school as a six-year-old and hid in the forest and never went back! That’s a nice Northern way to deal with outside influence <3<3<3 if I share even one allele with Dumgit, I am forever genetically proud!)

Proto-Finnish *tärise- to shake to shiver to tremble	PKY *tʰeλ- morpheme in many words meaning push, shove	Hungarian ráz to shake	Proto-Yukaghir *l'ir-/l'er- to tremble / shake
---	---	-------------------------------------	---

Proto-Finnish *västärikko <i>Motacilla alba</i>	Kott tʰ·qta / tʰ·qt <i>Motacilla alba</i>	Hungarian barázdabillegető <i>Motacilla alba</i>	Kolyma Yukaghir jaqad-a.čən-pičči: <i>Motacilla alba</i>
--	--	---	---

Remove the first syllable from Proto-Finnish & Hungarian, and repalatalize K-Y:

*tärikko	*rázdabillegető	*l'aqad-a.čən-pičči:
*täri-	*ráz-	*l'aq-

Then. all languages have their respective word for “to shake” in the species name, right after the first syllable. And yes yes, I know “But it’s from *barázda*!! or It’s from Yakut!!!” - are those really the only etymologies existing ;)?

Yeniseian family has the same linguistic logic in the name of this sweetbird:

“*Motacilla alba* = an animal that shakes or pushes something.” (And no, wagging does not qualify as shaking >:P it must be TREMBLING sort of shaking, as these words show!)

Here we see again that usually PKY / Kott / Ket / **q**/ inside a word corresponds to Proto-Finnish /**r**/, as demonstrated earlier. By replacing these, the Kott word is

tʰ·rta / tʰ·rt

and to my Finnish ear, **tʰ** sounds enough like an ä/ö/y that the Proto-Finnish form is with “tär/tör/tyr” and not “tar”. Even the PKY morpheme corresponds to words in Finnish like

tyrkätä

to prod, push, nudge

to shove, thrust

törkätä

to jab or poke once

törmätä

to collide with, crash into, impact

From törmätä, we get to the next correspondence from this group of sweeties:

Proto-Finnic *termä steep bank (edge of river or lake)	PKY *tʰu· concave portion of riverbank
---	---

And did I mention that the etymology for the Proto-Finnic word is

“Cognate with [Proto-Samic](#) **tearmē*, suggesting earlier **termä*; further origin unknown.”

Quite the goisndniicendsel!

Group

"SORRYPROTOGERMANSITISACTUALLYFROM: _PREGREEK_HMM_HEY_WTF!?!?"

Proto-Finnic	PY
*kauppa	*qʷapʰa / *qʷpʰa
trade	trade
commerce	to trade
goods	to sell
merchandise	

(I spoiled this in the beginning... remember? Older than... but there is more to follow. Soon.)

Aight here are some inklings of the future to come:

Finnic	PY
eh̥ta	*aqta
genuine	good
pure	well
<i>echt... 8D who borrowed</i>	beautiful
<i>whom... just asking for a friend...</i>	

Finnic	PY
ah̥kio	*aqti̯a:ŋsu:l
sled for hauling wood	sled for hauling wood

Proto-Uralic	PY
*aš̥k3	*aqti̯a:ŋ
sled for hauling wood	to haul wood

and then... pre-agricultural metallurgy... who would have guessed, since Proto-Indo-Europeans should obviously be the total bosses of pre-historical and historical technology... but more about that also, soon.... ;-----D

Proto-Finnic	PKA
*ah̥jo	*apʰu
forge, furnace, oven	to forge

Proto-Finnic	PKA
*hikin̥en	*apʰti̯u:ŋ
sweaty	sweaty

Proto-Finnic	OKet

Next pageZ: Uralic and Yenisean languages are related. Bold claim!! Even bolder claim: The connection can be found via Hungarian / Kamassian / Mator / Nganasan – a missing linkz0rz. Check out the “irregularities” which again are just sound laws that nobody has bothered to find out because everybody knows that they are not related at all. Also Fortescue was right, all North is related. Just you wait when I get all my stuff online. Prolly Ainu, Japonic, Tungusic, Turkic, Mongolic, Nivkh, Chukotko-Kamchatkan etc. can be definitely connected to the mix. Some of those featuring in the SKIN part.

Sorry for the shit layout. I will make it better when I have some time as if I ever had that luxury. Prolly you can still make out the details. Tip: screw the numerals and other stuff developed for shallow Proto-Indo-European time depth. This stuff is thousands of years older. So it is quite ironic that I am writing this in English?!11+1?!

And of course this means that Uralic languages are also distantly related to Northwest American languages. Eeehhh! What could be cooler??++!!?+ fine, probably this
<https://www.nature.com/articles/s41586-023-06557-9>

First things first:

I GOT WOOD

					Ket búntij ‘screw around’ meaning ‘spend time idly’	

Vuorean at the moment because mountains are cool. A new etymology for **βορέας** will also naturally come when I have time. Yeah right.

Nganasan irregularities, strange stuff in pronouns of Samoyedic languages etc. are just inherited words from the mother language of both Proto-Yeniseian and Proto-Uralic. Prolly Altaic “Sprachbund” is also a product of Yeniseian mixing with some different language versions arriving back from North America, since there is lots of Yeniseian stuff in Proto-Turkic, Proto-Mongolian etc... What? I should prove this also? All right, I guess it is up to me as usual to do everything. Take note that Proto-Permic ***ar** & Proto-Samoyedic ***ërö** prolly come from: ***šejg-xʷaj** → **ejgraj** → **egraj** → ***ar** + ***ërö**.

	Finnish	Proto-Uralic	Proto-Samoyedic	Hungarian	Tundra Nenets	Forest Enets	Kamassian	Koibale	Matoran	Nganasan	Proto-Yeniseian	Proto-Yukaghir

to kill

HAIDA

k'ut'álgan to kill

KÍL **tongue, language**

Since you came all the way here, take a looksie:

Finnish

Etymology

From the instructive form of the second infinitive of [maata](#) (standard [maaten](#)).

Pronunciation

- [IPA](#)^(key): /'ma:teˣ/, [ˈma:te(?)]
- Rhymes: [-a:te](#)
- Syllabification^(key): maa-te
- Hyphenation^(key): maa-te

Adverb

maate ([dialectal](#), [Southwest Finnish](#), [Satakunta](#), [Kymenlaakso](#), [Central Ostrobothnia](#), [South Karelia](#))

to [sleep](#), to [rest](#)

But, if it instead is an ancient compound of
maa + te

“earth + animate subject lies in a horizontal position” it would make total sense.

Where to get that suffix??? I NEED IT!!! Luckily, Vajda has already discovered it:

[*-tej](#) (“to lie in a stationary position”) (for one or more animate subjects)

While we are here, lying in a horizontal position, let’s also grab something to make us more comfortable.

Proto-Yeniseian:

***tejl** (plural [*tejl-Vŋ](#))

1. ([architecture](#)) [mat](#), [tent flooring](#); [bedding](#)

Composed of **[*-tej](#)** + **[*-l](#)** (instrument suffix).

Now, I wonder what that would sound in Finnish? **TEJL**? But we cannot have clusters like that in Finnish. Let’s metathesis instead. **TELJ**? And we cannot end words like that. Let’s add an A, it is the simplest vowel anyway. **TELJA**? Sounds a bit wrong, still. **TALJA**? Aah! There it is! So nice to lie on this “instrument of lying down in a horizontal position” as they would call it in Proto-Dene-Yeniseian <3 what luck that the -te also exists in North America with the same meaning!! I guess Vajda + others were totally right about the Dene- Yeniseian connection 8)

Proto-FinnicNoun

***talja**^[1]

1. [hide](#) (animal skin)

That reminds me of a horizontal meeting that is long overdue.....- → ZX

I'd Do Anything for Love (But I Won't Do That)

Since grammatical connections are the top of the tops, here are kinship words. A great sociobiological technology to reduce inbreeding, very useful in small populations.

PDY	* <i>lejn-ej</i>	‘son-in-law’;	PU	<i>*wänew</i> / <i>*wänewe</i>	
			PU	<i>*miñä</i>	
			PU	<i>*pojka</i>	
PDY	* <i>gaj-ej</i>	‘parent’s sibling’;	PU	<i>*šečä</i>	
			PU	<i>*nejde</i>	
			PU	<i>*näjte</i>	
			PU	<i>*äjjä</i>	
		‘parent’s elder sibling’			
PDY	* <i>web-ej</i>		P-Samic	<i>*eanōj</i>	maternal
			P-Finnic	<i>*tüttöi</i>	uncle

Note how in Proto-Uralic and some daughter languages, all kinship words have either -w or -j / -i in some form, except **šečä*, but I will come to that later.

In Proto-Finnic, if we suppose “daughter”, **tüt'är*, is a loan from an Indo-European language, the form **tüttoi* should prove the kinship suffix was still partly productive at that point in time.

Must be a coincidence. More will follow. Get your Lotto sheets ready.

Fine, one more. Three “coincidental homonyms” betwixt Yukaghir and Finnic! What are the odds!

Mechanism in short: debuccal. in PYuk, j ↔ g, metathesis, first vowel rises a-u. CU again soon<3

Proto-Yukaghir

**öyur*

K ugur **spine, ridge**; KJ ugur

K ugurčə **ski with fur on the bottom**; KJ ugurče; SD ugurce; T ugurče foot; shoes, boots; TK ugurt'e + leg; TJ ugurče; TD ugurče, -uogurče

K ugurče: **grayling** (*Thymallus*);

Proto-Finnic

harjus* **grayling (*Thymallus thymallus*)

harja* **mane / bristle / **crest**, comb / **brush** / **ridge (of a roof, a hill)**

(Yes I know, “Borrowed from Proto-Baltic”. but I would not bet on it any more... ;P)

Swadesh lists are useful and the concept is nice, especially considering that Wikipedia says “The Swadesh list was put together by Morris Swadesh on the basis of his intuition.”. Hee hee! What an awesome dude <3

He worked mostly in the warmer regions of the world, including tropics. Lucky chap! Now I do not want to nitpick but the list shows some preference to non-colder regions of the world.

This presents certain challenges in using regular Swadesh lists as tools in comparing the more northern languages. As a amusing side note, the new and sexy Leipzig–Jakarta list to test the degree of chronological separation of languages **does not even have the word “cold”** in it, whereas when I go to Wiktionary’s https://en.wiktionary.org/wiki/Appendix:Proto-Uralic_reconstructions I can get 23 hits on the page with the word “snow” alone. I reckon this is a sufficient demonstration that a new Swadesh list fine-tuned for north would be useful, or at least it is understandable when I say that I’d better make one instead of continuing to complain here... Up and coming next! SeeY’All!?

Edit: Next time, Swadesh indeed, about 50% cognates, beat THAT!
