

The North Remembers

Part 1:

Kajon väkeä, sinen kukkia

**We are older than all the gods
the dead and the never-born.**

Thank you for your interest! I will try to publish more asap. About the author on the last page. Let's get to business first. Perhaps you already figured out some languages that are in the mix. An unintentional puzzle as a side effect of not having time at all. Here are some fun cognates. More l8r.

<u>Uralic</u>	<u>Proto-Yukaghir</u>	<u>Turkic</u>	<u>Indo-European</u>				
Finnish hyttynen hyttinen hytikkä hytykkä	*kiče: *kuče:	PKY *t^huuttu:ŋ with midges PY *t^huĩt swarming insects					
mosquito	mosquito						
Proto-Finnic *oja	*oj	OKet *oga portage (carrying place between two navigable bodies of water)					
ditch brook, stream	to leave a road						
Proto-Finnic *tuulas night fishing (with a torch and a spear)		PKY *d̥u:ɖi fish at night by torchlight					
Proto-Finnic *sokēda	*soqo:r T soquor T soquortege pr. (a one- eyed reindeer)	Kott *sugur one-eyed	Karaim sogur blind	Yakut soxxor one-eyed	Sogdian kōr blind	Sanskrit kekara squint-eyed	PIE *kéh₂ikos one-eyed
blind							
							blind
Proto-Uralic *kaja *koja dawn	*čajl̥ day light T čajler- to dawn	PY *kʌ'n light *kʌnigʌ daybreak					

Since grammatical connections are the top of the tops, here are kinship words. A great sociobiological technology to reduce inbreeding, very useful in small populations.

PDY	* <i>lejn-ej</i>	‘son-in-law’;	PU	*wānew / *wānwe	
			PU	*miñä	
PDY	* <i>gaj-ej</i>	‘parent’s sibling’;	PU PU PU PU PU	*pojka *šečä *nejde *näjte *äjjä	
PDY	* <i>web-ej</i>	‘parent’s elder sibling’	P-Samic P-Finnic	*eanōj *tüttöi	maternal uncle

Note how in Proto-Uralic and some daughter languages, all kinship words have either -w or -j / -i in some form, except ***šečä**, but I will come to that later.

In Proto-Finnic, if we suppose “daughter”, *tüt’är, is a loan from an Indo-European language, the form *tüttöi should prove the kinship suffix was still partly productive at that point in time.

Must be a coincidence. More will follow. Get your Lotto sheets ready.

Fine, one more. Three “coincidental homonyms” betwixt Yukaghir and Finnic! What are the odds! Mechanism in short: debuccal. in PYuk, j ↔ g, metathesis, first vowel rises a-u. CU again soon<3
Proto-Yukaghir

**öyur*

K ugur **spine, ridge**; KJ ugur

K ugurčä **ski with fur on the bottom**; KJ ugurče; SD ugurce; T ugurče foot;

shoes, boots; TK ugurt’e + leg; TJ ugurče; TD ugurče, -uogurče

K ugurče: **grayling** (*Thymallus*);

Proto-Finnic

harjus* **grayling (*Thymallus thymallus*)

harja* **mane / bristle / crest, comb / brush / ridge (of a roof, a hill)

(Yes I know, “Borrowed from Proto-Baltic”. but I would not bet on it any more... ;P)

```

*****
*
* Author says a few things about self and other stuff:
*
* I have hundreds of putative cognates and some of them even with quite interesting proof
* by comparative method. Even better (??) than the ones before.
* What I do not have is time nor money. But I will try to have some quality of output to
* make my results easier to follow and falsify if possible.
*
* If falsification proves to be unsuccessful, a discovery appears. World is transformed. Nice!
*
* I am quite unknown in linguistic circles so my hope is that this publication will annoy
* everyone equally and thus have a higher chance of eventually being grudgingly accepted .
* Everyone was right and wrong. Science wins!
*
* If you are loaded and want to change the history as well as the future, here's a good chance.*
* I will setup Monero as soon as possible. If you want to cheer, mail me something sweet.
* Have a nice day!
*
* P.S. References are nonexistent atm. But I am standing on top of some really really huge
* brains in human forms. Their names will be added next.
*
