

An Alternative Analysis of the Morphological Structure of Japanese Nominal Adjectives — *NI*-adjectives¹

Shinya Makino

itakanro@g.ecc.u-tokyo.ac.jp

Abstract:

The present paper reanalyses the morphological structure of Japanese nominal adjectives (NAs) — also referred to as *na*-adjectives — in line with the author's preprint: Makino, S. (2025). *A New Analysis of the Morphological Structure of Japanese Verbal Adjectives — KU-adjectives*. Preprint, LingBuzz/Zenodo. <https://doi.org/10.5281/zenodo.15764311>. This is a preliminary version, and further revisions and clarifications will follow.

1. Introduction

Japanese **nominal adjectives** (NAs), also referred to as **na-adjectives** due to their attributive forms ending in *-na* — the so-called *rentaikei* in Japanese — as in *sizuka-na heya* "a quiet room", have often been analysed as "so-called NA stems + the copula =*da*" in parallel with "NPs + the copula =*da*" — e.g. *sizuka=da* "it is quiet" and *gakusei=da* "it is a student". This analysis, however, seems to have limitations, in that it cannot account for the fact that **only in the inflexion of NAs do forms ending in -ni exist**, as in *sizuka-ni* "quiet; quietly", whereas in the inflexion of the copula =*da* following NPs there are none, since forms such as *gakusei=ni* "in/at/to/from a/the student" are postpositional phrases headed by the postposition =*ni*. In other words, **the copula =da does not possess the inflected form =ni**, which is **not coincidental**. The present paper argues that **it is precisely this -ni which constitutes the defining constituent of NAs**, and undertakes an analysis of their morphological structure.

2. The identification of the NA stem, NA radical and NA thematic suffix

Traditionally, in Japanese **verbal adjectives** (VAs) — also referred to as adjectives, canonical adjectives or **i-adjectives**, owing to their attributive forms ending in *-i*, as in *taka-i tō* "a tall tower" — inflected forms such as the conjunctive form *taka-ku* from *takai* "to be high/tall", the so-called *renyōkei*, have been analysed as consisting of the so-called stem *taka-* and the so-called ending *-ku*. In Makino (2025: 6), by contrast, given **the multiple morphological, syntactic and semantic parallels with verbal stems** such as *tab-e* from *taberu* "to eat", it is assumed that ***taka-ku* as a whole**, functions as **the stem of a verbal adjective** — henceforth, **VA stem**.

The conjunctive form *sizuka-ni* from the NA *sizukada* "to be quiet", constituted by the so-called nominal-adjective stem *sizuka-* plus the so-called ending *-ni*, can occur in the same syntactic-semantic environments as the VA stem *taka-ku* — analysed in Makino (2025: 7–8) as consisting of the **VA radical** *taka-* plus the **VA thematic suffix**, or **stem-forming suffix**, *-ku* — as shown in (1) – (6), where "-" and "=" indicate affixation and enclisis, respectively:

(1) *Kare=wa sizuka-ni mat-ta*. "He danced quietly."

(2) *Kare=wa taka-ku mat-ta*. "He danced high."

- (3) sizuka-ni nar-u / sizuka-ni su-ru "to become/make quiet "
- (4) taka-ku nar-u / taka-ku su-ru "to become/make high/tall"
- (5) Watasi=wa sore=o yukai-ni [0past] omo-u. "I find it pleasant."
- (6) Watasi=wa sore=o tanosi-ku [0past] omo-u. "I find it enjoyable."
- (7) Watasi=wa sore=wa/ga yukai-da=to [-past] omo-u. "I think that it is pleasant."
- (8) Watasi=wa sore=wa/ga tanosi-i=to [-past] omo-u. "I think that it is enjoyable."
- (9) Watasi=wa sore=wa/ga yukai-dat-ta=to [+past] omo-u. "I think that it was pleasant."
- (10) Watasi=wa sore=wa/ga tanosi-k-at-ta=to [+past] omo-u. "I think that it was enjoyable."

In (1) and (2), both *sizuka-ni* and *taka-ku* function as **adverbial adjuncts of the verbal predicate** *mat-* — an allomorph of the stem *maw-* from the consonant-stem verb *ma(w)-u* "to dance" — and qualify the manner of dancing, whereas, in (3) and (4), both serve as **complements of the verbal predicates** *nar-* and *su-* from the state-change verbs *nar-u* "to become" and *su-ru* "to make", denoting the results of certain state changes.

In (5) and (6), on the other hand, both *yukai-ni* and *tanosi-ku* function as **atemporal predicates without temporal/modal endings** in the small clauses *sore=o yukai-ni* and *sore=o tanosi-ku*, respectively, which serve as complements of *omo-*, an allomorph of the verbal predicate *omow-* "to think/find". (Note that the inflexional endings *-ru* $\approx$ *-u*, specified as [-past], and *-ta*, specified as [+past], following *maw-*, *nar-*, *su-* and *omow-* in (1) – (10) are tense suffixes and function as the heads of tense phrases at the sentential level, independently of such verbal stems.) Furthermore, the verbal predicate *omow-* can take as its complements not only small clauses, as in (5) and (6), but also tensed complementiser phrases (CPs) headed by *=to*. In (7) and (8), *omow-* takes as its complements the [-past] CPs *sore=wa yukai-da=to* and *sore=wa tanosi-i=to* as its complements, whereas, in (9) and (10), it takes the [+past] CPs *sore=wa yukai-dat-ta=to* and *sore=wa tanosi-k-at-ta=to*.

The relationship between *sore* and *tanosi-ku*, *tanosi-i*, *tanosi-k-at-ta* in (6), (8), (10) is, in all cases, one between a theme and its state. If *tanosi-i* and *tanosi-k-at-ta* are stative predicates, then *tanosi-ku* must likewise be a stative predicate. Similarly, the relationship between *sore* and *yukai-ni*, *yukai-da*, *yukai-dat-ta* in (5), (7), (9) is in all cases the same one between a theme and its state. If *yukai-da* and *yukai-dat-ta* are stative predicates, then *yukai-ni* must likewise be a stative predicate. It is therefore evident that ***yukai-ni*, as well as *tanosi-ku*, functions not only**

as an adverbial adjunct but also as a predicate.

On the other hand, the fact that *yukai-ni*, like *tanosi-ku*, is an atemporal form without tense suffixes is indicated by the accusative marking of its complement *sore=o*. In Japanese, tense suffixes are nominative-case assigners, and nominative case is assigned to the specifier of the tense phrase. Since *tanosi-i* and *yukai-da* are specified as [–past], and *tanosi-k-at-ta* and *yukai-dat-ta* are specified as [+past], they each contain a tense suffix [–past] or [+past], respectively. The complement *sore*, which is not assigned any case within the phrases headed by the NA and the VA in (7) – (10), moves to the specifier position of the tense phrase headed by these tense suffixes, where it receives nominative case and surfaces as *sore=ga*, whereas, if the complement *sore* moves instead to the specifier position of the topic phrase headed by the phonologically zero topical suffix, it surfaces as *sore=wa*. By contrast, *yukai-ni* and *tanosi-ku* contain no tense suffix and thus the complement *sore* remains within the phrase headed by those forms, without movement to the tense phrase. Consequently, *sore* is assigned accusative case by the transitive predicate *omow-* and surfaces as *sore=o*. From this, it follows that the NA inflected forms ending in *-ni* can function as atemporal predicates, and that **it seems reductive to refer to them merely as adverbial forms.**

It is thus evident that in these examples **both *sizuka-ni* and *taka-ku* occur in the same phrase-structural positions and fulfil the same semantic function** — the statements here and afterwards likewise apply to both *yukai-ni* and *tanosi-ku* cited above. If *taka-ku* as a whole functions as a VA stem, as addressed in Makino (2025), it can be assumed that ***sizuka-ni* as a whole functions** in parallel as a **nominal-adjective stem** — hereafter, **NA stem**. Just as, in the VA stem *taka-ku*, the constituents *taka-* and *-ku* function as VA radical and VA thematic suffix, respectively, it can be assumed that, in the NA stem *sizuka-ni*, the so-called nominal-adjective stem *sizuka-* in fact constitutes a **nominal-adjective radical** — henceforth, **NA radical** — which encodes the lexical meaning specific to the nominal adjective, and that the so-called ending *-ni* functions as the **NA thematic suffix**, or **VA stem-forming suffix**, and licenses the NA radical as a syntactic constituent of category NA at the sentential level. Thus, the NA radical and the NA thematic suffix are the two immediate constituents of the NA stem as indicated in (11), where "-" indicates suffixation:

(11)

	Stem	
	Radical	Thematic suffix
VA	<i>taka-</i>	<i>-ku</i>
NA	<i>sizuka-</i>	<i>-ni</i>

Just as the VA radicals *taka-* and *tanosi-* alone, lacking the VA thematic suffix *-ku*, cannot

function as constituents of sentences, so too the NA radicals *sizuka-* and *yukai-* alone, lacking the NA thematic suffix *-ni*, cannot function as constituents of sentences, as indicated in (1) – (6) and (12) – (17):

- (12) **Kare=wa sizuka mat-ta*. "He danced quietly." (cf. *sizuka-ni mat-ta*)
- (13) **Kare=wa taka mat-ta*. "He danced high." (cf. *taka-ku mat-ta*)
- (14) **sizuka nar-u* / **sizuka su-ru* "to become/make quiet/silent" (cf. *sizuka-ni nar-u* / *su-ru*)
- (15) **taka nar-u* / **taka su-ru* "to become/make high/tall" (cf. *taka-ku nar-u* / *su-ru*)
- (16) **Watasi=wa sore=o yukai omot-ta*. "I found it pleasant." (cf. *yukai-ni omot-ta*)
- (17) **Watasi=wa sore=o tanosi omot-ta*. "I found it enjoyable." (cf. *tanosi-ku omot-ta*)

Formally, the NA thematic suffix *-ni*, as in *sizuka-ni*, exhibits the same phonological representation /ni/ as the locative postposition — or, case particle — *=ni*, as in *Tokyo=ni* "in/at/to Tokyo", and in fact the former seems to have originated from the latter. Furthermore, the suffix sequence *-ni-te* and the postposition-suffix sequence *=ni-te* suffered the same historical change — namely, *ni-te* → *de*, as in *sizuka-ni-te* and *yamato=ni-te* → *sizuka-de* and *yamato=de* — probably due to the deletion of *-i-* and the postnasal voicing of *-t-* due to *-n-*: *-ni-te* → *-n-te* → *-n-de* → *-de*. On the other hand, there is a **major functional difference** between the **inflected form ending in the NA thematic suffix *-ni*** and the **postpositional phrase headed by the postposition *=ni* with an NP complement**: the former can function as an adverbial adjunct of predicates, whereas the latter cannot function as such but rather as an argument of the predicate as shown in (18) – (20):

- (18) *Kare=wa sizuka-ni arui-ta/mat-ta*. "He walked/danced quietly."
- (19) **Kare=wa yūzin=ni arui-ta/mat-ta*. "*He walked/danced to a friend."
- (20) *Kare=wa yūzin=ni hon=o kasi-ta*. "He lent a book to a friend."

If in (20) the postpositional phrase *yūzin-ni* were replaced by the NA *sizuka-ni*, then the latter would likely not be recognised as such but rather as the postpositional phrase *Sizuka=ni* "to (a

woman named) Sizuka". Therefore, it seems plausible to distinguish functionally the NA thematic suffix *-ni* from the postposition *=ni*: the former, as the **head of stems**, merges with NA radicals — e.g. *sizuka-* "quietness", *odayaka-* "calmness", *kantan-* "easiness" — to form stems of the NA category — e.g. *sizuka-ni* "quiet", *odayaka-ni* "calm", *kantan-ni* "easy". By contrast, the latter, as the **head of phrases**, merges with NPs — e.g. *yūzin* "a friend", *taisetuna yūzin* "a dear friend", *mukasi=kara=no yūzin* "a friend from long ago" — to form postpositional phrases — e.g. *yūzin=ni* "in/to/from a friend", *taisetuna yūzin=ni* "in/to/from a dear friend", *mukasi=kara=no yūzin=ni* "in/to/from a friend from long ago". (Note with respect to the adverbial use of VAPs and NAs that, in this study, it is assumed that a phonologically zero AdvP head merges with VAPs and NAPs, such as *takaku-ku* and *sizuka-ni*, to form AdvPs, which function as adjuncts of predicates.)

Although morphosyntactically distinct, the NA thematic suffix *-ni* seems to share the same semantics with the locative postposition *=ni*: in the sequence "NA radical + *-ni*" it carries the meaning of "in/at". For example, the form *siawase*, which can function both as an NA radical and as an NP, forms an NA stem when merged with the NA thematic suffix *-ni*, but forms a PP when merged with the postposition *=ni*, as indicated in (21) and (22):

(21) *Kare=wa kazoku=to siawase-ni kurasite=iru*. "He is living happily with his family."

(22) *Kono miti=wa siawase=ni tuduite=iru*. "This road leads to happiness."

The bare form *siawase* "happiness" refers only to a certain mental state, without specifying whether, in a given situation, that state denotes the theme of motion, as in *koko=ni siawase=ga yatte=ku-ru* "happiness comes here", the object of pursuit, as in *watasi=wa siawase=o motome-ru* "I seek happiness", the goal of a path, as in *kono=miti=wa siawase=ni tuduite=iru* "this road leads to happiness" in (22), or bears some other semantic role. Once, however, the NA thematic suffix *-ni* is added to *siawase*, as in (21), the form *siawase-ni* comes to mean not simply "happiness" but "in/at happiness". In other words, ***-ni* "in/at" converts the NA radical *sizuka-* — which refers to a conceptual place "quietness" — into a conceptual location "in/at quietness"**, thereby **making it possible for the theme denoted by the subject to be located at that place**, and only at this stage does *siawase*, when merged with *-ni*, function predicatively in the sentence, that is, as a **predicative stem**, more specifically as an NA stem, as shown in

(23) and (24), where the NA radical *siawase*-, when merged with the NA thematic suffix *-ni*, functions as an atemporal predicate, whereas *siawase* without *-ni* cannot function as such:

(23) *Kanozyo=wa ima=no seikatu=o siawase-ni omot-ta*. "She found her present life happy."

(24) **Kanozyo=wa ima=no seikatu=o siawase omot-ta*. "idem."

It can be concluded from these observations that the **NA thematic suffix *-ni* functions morphosyntactically differently from the formally identical postposition *=ni***, yet **shares the same semantics of "in/at" with the locative postposition *=ni***, and functions as an **indispensable morphological and semantic constituent for the construction of the NA stem**. Thus, it seems **more appropriate to call NAs *ni*-adjectives** rather than *na*-adjectives, after their defining constituent *-ni*.

3. The sequence of the NA thematic suffix *-ni* and the endings *-te*, *-temo*, *-tatte*

The major difference between the NA stem *sizuka-ni* and the VA stem *taka-ku* is that, whereas both can function as atemporal predicates within small clauses, the former cannot occur alone at the end of non-sentence-final coordinated clauses, as shown in (25) and (26):

(25) *Kanozyo=wa se=ga taka-ku, sosite utokusii/utokusikatta*. "She is/was tall and beautiful."

(26) **Kare=wa sizuka-ni, sosite odayakada/odayakadatta*. "He is/was silent and calm."

Nevertheless, the inflected form *sizuka-de* "to be quiet/silent and", corresponding semantically to the VA inflected form *taka-ku-te* "to be high/tall and" — constituted by the VA stem *taka-ku* followed by the atemporal conjunctive suffix *-te* specified as [0past] — is able to occur in this position, as indicated in (27) and (28):

(27) *Kanozyo=wa se=ga taka-ku-te, utokusii/utokusikatta*. "She is/was tall and beautiful."

(28) *Kare=wa sizuka-de, odayakada/odayakadatta*. "He is/was silent and calm."

From the equation *taka-ku* : *taka-ku-te* = *sizuka-ni* : *suzuka-de*, it can be hypothesised that **-de** is a **surface form of the underlying sequence -ni-te**. In reality, in PPs — postpositional phrases — one can observe free variation between the postposition =*de* "in, at" and the postposition-plus-suffix sequence =*ni-te* "idem.", as in *Tokyo=de* ~ *Tokyo=ni-te* "in/at Tokyo", though the latter is a more formal and literal form ("=" indicates enclisis). Furthermore, the assumed underlying form *sizuka-ni-te* is historically attested as an actual classical form, which constitutes the etymon of the modern *sizuka-de*. It does not seem implausible, therefore, to assume that the surface form *suzuka-de* derives synchronically from the underlying *sizuka-ni-te*, on the condition that in contemporary language the surface realisation of /-ni-te/ as [-de] is obligatory in NA stems. Building on this interpretation, the forms *sizuka-demo* and *sizuka-datte* can be analysed in the same way as *sizuka-de*, as in (29):

(29)

	Stem		Ending	Surface form
	Radical	Thematic suffix		
NA	<i>sizuka-</i>	-ni		<i>sizuka-ni</i>
	<i>sizuka-</i>	-ni	-te	<i>sizuka-de</i>
	<i>sizuka-</i>	-ni	-temo	<i>sizuka-demo</i>
	<i>sizuka-</i>	-ni	-tatte	<i>sizuka-datte</i>
VA	<i>taka-</i>	-ku		<i>taka-ku</i>
	<i>taka-</i>	-ku	-te	<i>taka-ku-te</i>
	<i>taka-</i>	-ku	-temo	<i>taka-ku-temo</i>
	<i>taka-</i>	-ku	-tatte	<i>taka-ku-tatte</i>

→

The problem with this analysis is that the shaded derivation *sizuka-ni-tatte* → *sizuka-datte* is **neither diachronically attested nor consistent with our native-speaker intuition**. In this paper, nevertheless, for the reasons set out in Section 5, this analysis is maintained.

4. The analysis of the past form and morphosyntactically related forms

The past form of the NA *sizukada* exhibits free variation between *sizuka-de#at-ta* and *sizuka-d+at-ta*, both ending in the tense suffix *-ta* specified as [+past]. The former is more formal and literal than the latter, which derives formally from the former through the deletion of the vowel *-e* in *+de* before the following vowel *a-* in *at-*. In the former *sizuka+de#at-ta*, it is possible to insert at the sentential level the focus particle =*mo* "too, also" or the topicalisation/contrast particle =*wa* "as for, etc." — both of which are enclitics — immediately after *sizuka-de*, without insertion of new constituents or deletion of existing ones, as in (30), where "#" denotes a

morphological word boundary that coincides with a prosodic word boundary:

(30) *sizuka-de#at-ta* → *sizuka-de=mo#atta* / *sizuka-de=wa#at-ta*

In *sizuka-de#at-ta*, therefore, both *sizuka-de* and *at-ta* constitute morphologically autonomous words. If the *-de* in *sizuka-de#at-ta* derives from *-ni-te*, much like the *-de* in *sizuka-de* used alone as an atemporal form as in (28), and since *at-* is the allomorph of the stem *ar-* of the verb *ar-u* "to be", the derivation from the underlying form — henceforth, UF — to the surface forms — hereafter, SFs — can be assumed as schematised in (31):

(31) UF: *sizuka-ni-te#ar-tar* → SF: *sizuka-de#at-ta* → SF: *sizuka-d+at-ta*

This derivation proceeds in almost exactly the same manner as that of the past form of VAs such as *taka-k+at-ta* from *takai* in (32), where IF represents an intermediate form:

(32) UF: *taka-ku#ar-tar* → IF: *taka-ku#at-ta* → SF: *taka-k+at-ta*

Just as the VA thematic suffix *-ku* deletes its vowel *-u* before the light verb stem *at-*, the suffix sequence *-de*, derived from *-ni-te*, deletes its vowel *-e* in the same morphosyntactic context. The only difference is that *takaku* in (32) is a **stem** without ending, whereas *sizuka-ni-te*, realised as *sizuka-de*, constitutes a **word** composed of the stem *sizuka-ni* and an inflexional suffix *-te*. The deletion of the stem-final *-e* in the surface *sizuka-de* before *at-* in (31) seems to indicate the compounding of *sizuka-de* with *at-*, much like that of *-u* in *taka-ku* before the same *at-* in (32).

Under this analysis, the morphological structure of *sizuka-de#at-ta* and *sizuka-d+at-ta* in (31) may be represented as in (33), where "+" indicates compounding, and "them.suff." and "inflex.suff." abbreviate "thematic suffix" and "inflexional suffix", respectively:

(33)

Word (when <i>-ni-te</i> → <i>-d</i>)					Surface form
Word			Word		
Stem		Ending	Light verb stem	Ending	
Radical	Them.suff.	Inflex.suff.	Light verb radical	Inflex. suff.	
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar [+past]</i>	
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar [+past]</i>	

<i>sizuka-d+at-ta</i>
<i>sizuka-de#at-ta</i>

Other forms of this type with verbal endings *-tar-ō*, *-tar-a(-ba)*, *-tar-i*, *-ru*, *-reba*, *-jō*, *-e*, *-tutu* and *-nagara* — including the forms in (29) — can be analysed as shown in (34):

(34)

Word (when <i>-ni</i> , <i>-ni-te</i> → <i>-n</i> , <i>-d</i>)					Surface form
Word			Word		
Stem		Ending	LV stem	Ending	
Radical	Them.suff.	Inflex.suff.	LV radical	Inflex.suff.	
<i>sizuka-</i>	<i>-ni</i>				<i>sizuka-ni</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>			<i>sizuka-de</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-temo</i>			<i>sizuka-demo</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-tatte</i>			<i>sizuka-datte</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-ru</i> [–past]	<i>sizuka-de#ar-u</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-reba</i>	<i>sizuka-de#ar-eba</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-jō</i>	<i>sizuka-d+ar-ō</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-jō</i>	<i>sizuka-de#ar-ō</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-e</i>	<i>sizuka-de#ar-e</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar</i> [+past]	<i>sizuka-d+at-ta</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar</i> [+past]	<i>sizuka-de#at-ta</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-ō</i>	<i>sizuka-d+at-tar-ō</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-ō</i>	<i>sizuka-de#at-tar-ō</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-a(-ba)</i>	<i>sizuka-d+at-tar-a(-ba)</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-a(-ba)</i>	<i>sizuka-de#at-tar-a(-ba)</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-i</i>	<i>sizuka-d+at-tar-i</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-i</i>	<i>sizuka-de#at-tar-i</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tutu</i>	<i>sizuka-de#ari-tutu</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-nagara</i>	<i>sizuka-de#ari-nagara</i>

In the underlying forms of *sizuka-de* and *sizuka-demo* — namely, *sizuka-ni-te* and *sizuka-ni-temo* — it is possible to insert the particles =*mo* or =*wa* at the sentential level between the NA stem *sizuka-ni* and the inflexional suffixes *-te* and *-temo*, just as it is between the VA stem *taka-ku* and the same suffixes *-te* and *-temo* in *taka-ku-te* and *taka-ku-temo*, as shown in (35) – (38):

(35) *sizuka-ni* + =*wa* + *-te* → *sizuka-ni-te*=*wa#ar-te* → *sizuka-de*=*wa#at-te*

(36) *taka-ku* + =*wa* + *-te* → *taka-ku*=*wa#ar-te* → *taka-ku*=*wa#at-te*

(37) *sizuka-ni* + =*wa* + *-temo* → *sizuka-ni-te*=*wa#ar-temo* → *sizuka-de*=*wa#at-temo*

(38) *taka-ku* + =*wa* + *-temo* → *taka-ku*=*wa#ar-temo* → *taka-ku*=*wa#at-temo*

In this operation, apart from the fact that the addition of *-te* to the NA stem *sizuka-ni* yields the

word-level form *sizuka-ni-te*, which surfaces as *sizuka-de*, the morphosyntactic process is identical: through the insertion of *=wa*, the suffixes *-te* and *-temo* are separated from the stems *sizuka-ni* and *taka-ku* and thereby rendered stemless, whereupon the stem *ar-* of the light verb *ar-u* is inserted before them, resolving this stemlessness. This proves that *sizuka-ni* and *taka-ku* alike function as predicative stems. This operation can also be applied to the underlying form of the NA *sizuka-datte* — namely, *sizuka-ni-tatte* hypothesised in (29) — as well as to the VA *taka-ku-tatte*, as indicated in (39) and (40):

(39) *sizuka-ni* + *=wa* + *-tatte* → *sizuka-ni-te=wa#ar-tatte* → *sizuka-de=wa#at-tatte*

(40) *taka-ku* + *=wa* + *-tatte* → *taka-ku=wa#ar-tatte* → *taka-ku=wa#at-tatte*

We posit *sizuka-ni-tatte* as the UF of *sizuka-datte* — which is neither diachronically attested nor consistent with our native-speaker intuition — on the basis of the homogeneity of the processes in (35), (37) and (39).

5. The other forms: *sizuka-d+a*, *sizuka-n+a*, *sizuka-n+ar-u*, *sizuka-n+ar-a(-ba)*

The surface non-past form shows free variation between *sizuka-de#ar-u* and *sizuka-d+a*, the former being more formal and literal. It can be observed that, in the latter, the vowel *-e* in the suffix sequence *-de* is deleted before another vowel *a-*, much like the *-e* of *-de* in *sizuka-de#at-ta* → *sizuka-d+at-ta* discussed in Section 4. Furthermore, neither the final consonant *-r* of the light verb stem *ar-* nor the allomorph *-u* of the non-past suffix *-ru* appear. The more informal and colloquial form *sizuka-d+a* nevertheless has the same non-past value as *sizuka-de#ar-u*. From this, it can be hypothesised that, in *sizuka-d+a*, the non-past suffix does not bear the overt form *-ru* but the phonologically zero *-0*, just as it does in VA non-past forms such as *taka-i-0*, and that the final *-r* of the light verb stem is deleted at the surface level by virtue of its position at the word-final boundary. Thus, the derivation from the UF to the SF via the IF can be assumed as in (41):

(41) UF: *sizuka-ni-te#ar-0* → IF: *sizuka-de#a* → SF: *sizuka-d+a*

Historically, although a copula, the form =*de#a*, which yielded the modern =*d+a*, can be attested in Azuchi–Momoyama-period materials: *bonnin yorimo giūzaini fuxôzuru cotodea* "(it) is a reason for imposing a heavier guilt (on him) than on an ordinary person" (Amakusa Edition of *Esopo no fabulas*, 1593, p.475, ll.10-11, in Text Data Sets for Research on the History of Japanese). The attributive form exhibits practically the same type of free variation between *sizuka-n+ar-u* and *sizuka-n+a* as *sizuka-de#ar-u* and *sizuka-d+a*, the former being more formal and literal. In these forms, *sizuka-n-* can be interpreted as the underlying NA stem *sizuka-ni* deleting its final vowel *-i* before the following vowel *a-*. (Note that, historically, the etymon of *n+ar-u* was in fact =*ni#ar-u*). Thus, the derivation of each form from the UF to the SF can be assumed as in (42) and (43), respectively:

(42) UF: *sizuka-ni#ar-ru* → SF: *sizuka-n+ar-u*

(43) UF: *sizuka-ni#ar-0* → SF: *sizuka-n+a*

The morphological structure of the forms in (41) – (43) — including the imperative form *sizuka-n+ar-e* "Be quiet/silent", which is more formal and literal than the current *sizuka-de#ar-e*, and the conditional form *sizuka-n+ar-a(-ba)* "if it is quiet/silent", with a semantically synonymous yet morphologically distinct form *sizuka-de#ar-eba* — is represented in (44):

(44)

6. NAs ending in *-d+a* /*-ni-te#ar-0*/ vs. the copula =*d+a* /*=de#ar-0*/

NAs such as *sizuka-d+a* have often been analysed — in parallel with the structure "NPs + the

copula $=d+a$ ", such as *gakusei* + $=d+a$ — as "so-called NA stems + the copula $=d+a$ ", such as *sizuka* + $=d+a$. However, there are notable differences between these two structures, as noted in (45) – (47):

- (45) As stated in Section 2, **NAs have an inflected form ending in $-ni$** — e.g. *sizuka-ni* — whereas **NPs + $=da$ do not have an inflected form consisting of NP + $=ni$** . Such forms — e.g. *gakusei=ni* — are **syntactically PPs**.
- (46) In contemporary standard Japanese, **NAs exhibit inflected forms that contain $-ni$ but not $-te$** , such as *sizuka-n+a daiti* "a land that is quiet", *sizuka-n+ar-u daiti* "idem." (more formal and literal), *sizuka-n+ar-e* "be quiet/silent" (highly formal and literal) and *sizuka-n-ar-a(-ba)* "if it is quiet". By contrast, **NPs + $=d+a$ do not generally exhibit inflected forms with $-ni$ but without $-te$** . Forms such as **gakusei=n+a wakamono* "a youth that is a student", **gakusei=n+ar-u wakamono* "idem." and **gakusei=n+ar-e* "be a student" — which would be *gakusei=no wakamono*, *gakusei=de#ar-u wakamono* and *gakusei=de#ar-e* in standard language — are not normally used. (See Footnote 2 for the fossilised form *gakusei=n-ar-a(-ba)* "if it is a student".)
- (47) In certain fixed expressions such as "NPs + $=n+a$ mono= de " and "NPs + $=n+ar-u$ mono" — e.g. *watasi=wa gakusei=n+a mono=de* "because/since I am (qualified/characterised as) a student" and *gakusei=n+ar-u=mono* "that which is (qualified/characterised as) a student" — and in colloquial expressions such as *gakusei=n+a kanzi*, which is nearly synonymous with *gakuseiteki-n+a kanzi* "a student-like impression", inflected forms with $-ni$ but without $-te$ can be used. In these examples, nevertheless, **the NP *gakusei* does not seem to refer to an individual but rather to properties, qualities or characteristics, and thus is semantically closer to NA radicals**².

If the $-d+a$ of NAs is regarded as the same copula as $=d+a$ in NPs + $=d+a$, it becomes difficult

² The only exception is, to our knowledge, *gakusei=n+ar-a(-ba)* "if it is a student", in which the NP *gakusei* refers to an individual. This fixed conditional expression $=n+ar-a(-ba)$, derived from the underlying $=ni\#ar-a(-ba)$, appears to be a fossilised form inherited from classical Japanese, where $=n+ari$, derived from the underlying $=ni\#ar-0$, functioned as the standard copula. Furthermore, the form $=nara(ba)$ can nowadays occur immediately after non-nominal expressions, as in *Karera=ga koko=ni kuru=nara(-ba)* "if they come here", which indicates that $=naraba$ already functions not only as a copula but also, as a whole, as a conjunction.

to account for the presence or absence of inflected forms ending in *-ni* in (45), the presence or absence of forms containing only *-ni* in contemporary standard language in (46) and the affinity of *-ni* with NPs that denote not individuals but properties, qualities or characteristics in (47).

By contrast, if it is assumed that, as stated in Section 2, ***-ni* is an indispensable morphological constituent for the construction of the NA stem**, whereas the copula *=d+a*, which merges with NPs, no longer analytically contains this *-ni* — in other words, that **the minimal underlying unit involved in the copula *=d+a* is not *=ni-te* but rather *=de*, which denotes "equation" or "identity"** — then the facts become explicable. From these observations, it can be inferred that **the copula *=d+a***, which merges with NPs, can be analysed as in (48):

(48) NPs + **the copula stem *=de*** + the stem *ar-* of the light verb *ar-u* + inflexional endings

whereas NA inflected forms can be analysed as in (49):

(49) NA radicals + **the NA thematic suffix *-ni*** + **the inflexional ending *-te***
+ the stem *ar-* of the light verb *ar-u* + inflexional endings.

In this view, in (47) — *watasi=wa gakusei=n+a mono=de*, *gakusei=n+ar-u=mono*, and *gakusei=n+a kanzi* — it is also possible to interpret ***gakusei=n* as constituting, at the syntactic level** rather than at the lexical level, **the NA stem *gakusei-ni*, surfacing as *gakusei-n***.

Finally, comparing *sizuka-n+ar-u koto* with *sizuka-de#ar-u koto*, it must be concluded that *-ni* and *-de* do not exhibit complementary distribution, since both occur in the same underlying context *sizka-__#ar-ru*, as in *sizuka-ni#ar-ru*, surfacing as *sizuka-n+ar-u*, and *sizka-ni-te#ar-ru*, surfacing as *sizuka-de#ar-u*. Accordingly, it must be concluded that ***-ni* and *-de* are not merely allomorphs of a single thematic suffix in NA stems, *-de* having to be analysed underlyingly as the suffix sequence *-ni-te***.

7. Isomorphism between NA inflected forms and periphrastic V forms in *-te#ar-u*

The NA inflected form *sizuka-de#at-ta* has exactly the same pattern of underlying structure

as the periphrastic verbal form that denotes a result state such as *nob-e-te#at-ta* "(that) someone had extended/stated", *n-i-te#at-ta* "(that) someone had boiled" and *jon-de#at-ta* "(that) someone had read", derived from the underlying *nob-e-te#ar-tar*, *n-i-te#ar-tar* and *jom-0-te#ar-tar*, respectively, as indicated in (50) – (53):

(50) UF: *sizuka-ni-te#ar-tar* → SF: *sizuka-de#at-ta* → SF: *sizuka-d+at-ta*

(51) UF: *nob-e-te#ar-tar* → SF: *nob-e-te#at-ta*

(52) UF: *n-i-te#ar-tar* → SF: *n-i-te#at-ta*

(53) UF: *jom-0-te#ar-tar* → SF: *jon-de#at-ta*

The common structure shared by these four forms can be represented as in (54):

(54) [[[radical] thematic suffix *-ni*, *-e*, *-i* or *-0*] inflexional suffix *-te*]

[[[light verb radical *ar-*] thematic suffix *-0*] inflexional suffix(es)]

as schematised in (55), where the thematic suffix *-0* of the stem *ar-0* of the light verb *ar-u* is omitted for reasons of space:

(55)

Word			Word		Surface form

<i>nob-</i>	<i>-e</i>				<i>nob-e</i>
<i>sizuka-</i>	<i>-ni</i>				<i>sizuka-ni</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>			<i>nob-e-te</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>			<i>sizuka-de</i>
<i>nob-</i>	<i>-e</i>	<i>-temo</i>			<i>nob-e-temo</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-temo</i>			<i>sizuka-demo</i>
<i>nob-</i>	<i>-e</i>	<i>-tatte</i>			<i>nob-e-tatte</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-tatte</i>			<i>sizuka-datte</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-ru</i> [–past]	<i>nob-e-te#ar-u</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-ru</i> [–past]	<i>sizuka-de#ar-u</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-reba</i>	<i>nob-e-te#ar-eba</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-reba</i>	<i>sizuka-de#ar-eba</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-jō</i>	<i>nob-e-te#ar-ō</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-jō</i>	<i>sizuka-de#ar-ō</i>

<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-tar</i> [+past]	<i>nob-e-te#at-ta</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar</i> [+past]	<i>sizuka-de#at-ta</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-ō</i>	<i>nob-e-te#at-tar-ō</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-ō</i>	<i>sizuka-de#at-tar-ō</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-a(-ba)</i>	<i>nob-e-te#at-tar-a(-ba)</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-a(-ba)</i>	<i>sizuka-de#at-tar-a(-ba)</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-i</i>	<i>nob-e-te#at-tar-i</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tar-i</i>	<i>sizuka-de#at-tar-i</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-tutu</i>	<i>nob-e-te#ari-tutu</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-tutu</i>	<i>sizuka-de#ari-tutu</i>
<i>nob-</i>	<i>-e</i>	<i>-te</i>	<i>ar-</i>	<i>-nagara</i>	<i>nob-e-te#ari-nagara</i>
<i>sizuka-</i>	<i>-ni</i>	<i>-te</i>	<i>ar-</i>	<i>-nagara</i>	<i>sizuka-de#ari-nagara</i>

This means that **nominal adjectives**, like **true verbs** and **verbal adjectives**, belong to a **category** — namely, *predicate* — that **inflects verbally**. The only fundamental difference is that **the thematic suffix is -ni in NA stems** — e.g. *sizuka-ni-te#ar-ru* — whereas **in V stems it is -e or -i in vowel-stem verbs** — e.g. *nob-e-te#ar-ru*, *n-i-te#ar-ru* "it has boiled" — and **-0 in consonant-stem verbs** — e.g. *yom-0-te#ar-ru* "it has read", realised as *yon-de#ar-u*. (Note moreover that in the V stem + *-te#ar-ru* construction, compounding of the type *sizuka-de#at-ta* → *sizuka-d+at-ta* does not occur.)

In the constructions (50) – (53), *nob-e* and *n-i* denote a change of state effected by a causer, whereas *yom-0* denotes a (culminated) process performed by an agent. When the suffix *-te* is attached, forming *nob-e-te*, *n-i-te* and *yom-0-te*, these forms come to denote the state resulting from such a change of state or culminated process. On the other hand, as for *sizuka-ni*, in Classical Japanese the metaphorical locative *sizuka-ni#ar-0* "it is in/at quietness", surfacing as *sizuka-n+ari*, and the physical locative *yamato=ni#ar-0* "it is in Yamato", surfacing as *yamato=ni#ari*, shared the same underlying structure: both *sizuka-ni* and *yamato=ni* essentially expressed location. Later, the two forms diverged: *sizuka-ni* came to take *-te*, explicitly marking the shift from location "in/at quietness" to state "quiet", and this *sizuka-ni-te* surfaces in Modern Japanese as *sizuka-de*, yielding *sizuka-de#ar-u* "it is quiet", whereas *yamato=ni* has remained unchanged, yielding today *yamato=ni#ar-u* or *yamato=ni#i-ru* "it is in Yamato". Given this structural and semantic commonality among *sizuka-ni-te*, *nob-e-te*, *n-i-te* and *yom-0-te*, it may be assumed that **-te** in these constructions serves as a **marker explicitly encoding stativeness**.

8. Analysis summary — Conclusion

(i) The inflected forms of the NA *sizukada* can be morphologically analysed as shown in (56):

(56)

Word (when <i>-ni</i> , <i>-ni-te</i> → <i>-n-</i> , <i>-d</i>)					Surface form

(ii) The NA radical is the element that encodes the lexical meaning specific to each nominal adjective. It can occur independently as a constituent of derived or compound words — for example, *hukisoku-* in *hukisoku-sa* "irregularity" and *hukisoku+dōsi* "irregular verb" — but it cannot, on its own, be used as a syntactic constituent belonging to the category VA at the sentential level — e.g. **Kare=wa sizuka mat-ta* "he danced quietly", **sizuka nar-u / *sizuka su-ru* "to become/make quiet/silent", or **sizuka+a hito* "a quiet person". Compared to VA radicals, however, NA radicals exhibit greater independence: in more colloquial speech, they may occur as predicates of main clauses without *-d+a*, as in *Kare=wa sugoku sizuka* "he very quiet" vs. the more canonical *Kare=wa sugoku sizuka-d+a* "he is very quiet".

(iii) The function of the NA thematic suffix *-ni* is to license the NA radical as a syntactic constituent of category NA within sentential phrase structure. **It is precisely this *-ni* which constitutes the defining constituent of NAs** — an indispensable morphosyntactic and semantic constituent for the construction of the NA stem — and, as noted in (ii), NA radicals such as *sizuka-* on their own cannot be used as NAs in a sentence. Only when combined with *-ni* do they become syntactically eligible to function as constituents of category NA — e.g. *Kare=wa sizuka-ni mat-ta* "he danced quietly", *sizuka-ni nar-u* / *sizuka-ni su-ru* "to become/make quiet/silent", or *sizuka-n+a hito* "a quiet person". The NA thematic suffix *-ni* functions morphosyntactically differently from the formally identical postposition *=ni*, yet shares the same semantics of "in/at", which appears to be a semantically indispensable element for NAs.

(iv) When the thematic suffix *-ni* is followed by the inflexional suffixes *-te*, *-temo*, *-tatte*, it undergoes amalgamation, yielding *-de*, *-demo*, *-datte*. Furthermore, The thematic suffix *-ni* and the contracted form *-de* of the sequence *-ni-te* often deletes its final *-e* before the allomorphs of the stem *ar-* of the auxiliary verb *ar-u*. Where this deletion is optional, the non-deletion form is more formal and literal. Although the derivation *-ni-tatte* → *-datte* is neither diachronically attested nor consistent with our native-speaker intuition, we nevertheless posit, for example, *sizuka-ni-tatte* as the underlying form of *sizuka-datte* on the basis of the homogeneity of the following processes:

sizuka-ni + *=wa* + *-te* → *sizuka-ni-te=wa#ar-te* → *sizuka-de=wa#at-te*

sizuka-ni + *=wa* + *-temo* → *sizuka-ni-te=wa#ar-temo* → *sizuka-de=wa#at-temo*

sizuka-ni + *=wa* + *-tatte* → *sizuka-ni-te=wa#ar-tatte* → *sizuka-de=wa#at-tatte*.

(v) NAs such as *sizuka-d+a* have often been analysed as "so-called NA stems + the copula *=d+a*", such as *sizuka* + *=d+a*, in parallel with the structure "NPs + the copula *=d+a*", such as *gakusei* + *=d+a*. However, if the *-d+a* of NAs is regarded as the same copula as *=d+a* in NPs + *=d+a*, it becomes difficult to account for the absence of forms containing only *-ni* without *-te* in NPs + *=d+a* in contemporary standard language. It can thus be inferred that the copula *=d+a*, which merges with NPs, can be analysed as:

NPs + the copula stem =de + the stem *ar-* of the light verb *ar-u* + inflexional endings

whereas NA inflected forms can be analysed as:

NA radicals + the NA thematic suffix -ni + the inflexional ending -te

+ the stem *ar-* of the light verb *ar-u* + inflexional endings

The copula stem =de denotes **equation/identity** whereas **the NA thematic suffix -ni** and the **inflexional ending -te** indicate **conceptual location "in/at"** and **stativeness**, respectively. Historically both the copular =de — underlyingly =de — and the nominal-adjectival -de — underlyingly -ni-te — originated from the same sequence *ni-te*, but synchronically they have diverged into distinct morphosyntactic and semantic units.

(vi) In certain fixed expressions such as "NPs + =*n+a mono=de*" and "NPs + =*n+ar-u mono*", and in colloquial expressions such as *NPs=n+a kanzi*, inflected forms with -ni but without -te of the copula =*d+a* can be used. In these expressions, nevertheless, the NP does not seem to refer to an individual but rather to properties, qualities or characteristics, and thus is semantically closer to NA radicals. Accordingly, it is also possible to interpret **the NP=*n*** in those expressions as **constituting, at the syntactic level** rather than at the lexical level, **the NA stem NP-ni, surfacing as NP-n**.

(vii) The NA inflected form with -de at the surface level — e.g. *sizuka-de#ar-u*, derived from *sizuka-ni-te#ar-ru* — has exactly the same pattern of underlying structure as the periphrastic verbal forms that denote a result state — e.g. *nob-e-te#ar-u*, *n-i-te#ar-u*, *yon-de#ar-u*, derived from *nob-e-te#ar-ru*, *n-i-te#ar-ru*, *yom-0-te#ar-ru*, respectively. The common structure shared by both forms is:

[[[radical] thematic suffix -ni, -e, -i or -0] inflexional suffix -te]

[[[light verb radical *ar-*] thematic suffix -0] inflexional suffix(es)]

This means that nominal adjectives, like true verbs and verbal adjectives, belong to a category — namely, *predicate* — that inflects verbally.
