

The North Remembers

Part 1:

Kajon väkeä, sinen kukkia

**We are older than all the gods
the dead and the never-born.**

Aight so I Quess I'd better schwing the Swadesh first because meikän mersu menee kolmeesataa. I have other Swadesh list stuff too but it is somewhere further in the pdf. I will slap them together when I can.....!

	Proto- Yeniseian/ Dene- Yeniseian	Proto- Yukaghir	Proto-Uralic Finnish	Hungarian
*stone	*cew	*qyj-	*kiwe *wäke (PU) (strength, power) Proto- Samoyed *ket- (gen/acc pronominal stem) Nganasan he/she/it	
*person	*qit	*köntə *čaya:/ *čaŋqa: *čo:qiń		
*dog	*cajb	MU chápnjä	tiisti (Finnish)	

*knee	*bátpul (PKY)	*poyɔ-/ *ponɣa- KJ porle ‘knee’	*polwe (pol-we, pul-bet, bet-pul, bát-pul)		
	*butl-ja ‘leg’	TJ čoyul leg;	*jalka		
*one	*qa=s	(je:kə, e:kə, qa)	*ke:jə (first, earlier)	(jə:ke, ə:ke, üke)	eka (colloquial “first” 8D)
*fish	*k ^h ola (PKA, huso ruthenus)	*ol'oyə	*kala (Kamassian “k ^h ola”, go figure 8DD) (1)		
	*tluwq() ‘fish’ DENE- YEN. RECONST RUCTION		*lohi (salmon) (Proto- Finnic)(2)		tok (sturgeon) Hungarian finally a mystery solved!

(1) PYuk *ol'oyə & PU *kala & PF *lohi could all derive from common Dene-Yenisean *tluwq() via e.g. the following: *tluwq() → *taluwq() (PYuk *ol'oyə) → *luqV → PU *kala, PF *kala, PF *lohi

(2) Normally I try to be respectful for the science of others but the current etymology of this... 'Borrowed from Proto-Baltic' ... get real... salmon in its numerous species has been the number one food of the North for 10000+ years. That's why there is the same name for it across the Arctic... "Baltic borrowing" GOOBY PLS!!!

THE INDO-EUROPEANS GOT THIS WORD FROM THE NORTHERN PEOPLE, NOT THE OTHER WAY AROUND DDDD; NOT ONLY BECAUSE SALMONS **DO NOT EXIST** IN THE TRADITIONAL INDO-EUROPEAN TERRITORY!!!! LOOK AT THIS MAP! THE NICE BLUE COLOUR IN THERE IS THE OCEAN! THE DARK BLUE COLOUR IS A DISTRIBUTION MAP OF THE *Salmo salar*!!!!!!!!! WHERE IS THE PONTIC-CASPIAN STEPPE?? TOP 5 EXAMPLE OF UNFATHOMABLE AND TOTALLY UNBASED INDO-EUROPEAN WORSHIP IN LINGUISTICS!!!! AARGHHHH IT BURNS!!!!!!!!!!!!

Strong words from someone who makes this kind of explanatory pictures, I know!!!!!!!!!! I am annoyed but still not in the wrong!11!! Aight maybe this helped and I can be more sensible on the next pages. P.S. After this I found out there is/was a concept of "SALMON PROBLEM" in PIE studies! PROBLEM REMOVED, FIND A NEW PROBLEM THANKYOUVERYMUCH!1111111111

Hello again! Sensible or not? At least it is something completely different - aina kun voidaan, me tykitellään. Hello y'all PIE's! Time to get shocked!
 Coincidentally also a juicy bonus sector for you long-rangers... and rest assured this is only the beginning.....
 English leaf, from PIE ***lew^bh-** - **I posit: PIE word is a loanword from the Vuorean proto-language per the following:**

Proto-Uralic	Proto-Sino-Tibetan (PST was THOUSANDS of years before PIE, hee hee, beat that!)
*lapp₃	*lap
a flat surface	leaf
	leaf-like thing

Proto-Uralic	Proto-Sino-Tibetan	PY
*lapta	*lep - l₁ap	*lep
flat, thin	flat, thin, flat object	a broad and flat object

From ***l₁ap** to **PPY** (even the first consonant matches **PPY** beautifully <3), whence eventually Finnic “**lehvä**”.

Finnish	Pre-Proto-Yeniseian	
lehvä	*ʒw'ʌpʰʌ	from this stage, PIE *lew^bh
sprig (with leaves)	leaf	
	PY	
	*ʌʰpʰʌ	-h - -'ʌ -
	leaf	

Finnish	PY	
löyhä	*ʌpʰʌl	*lapʰʌnʌj slap slap lapseʰj *pʰosij
loose	loose	FIN: läpsähtää
	wide	borrowed into proto-italian and proto-germanic as slappe, sleppa

Finnish	free
löyhätapainen	unmarried
loose (promiscuous)	

Finnish	
löyhdyttää	*ʌpʰʌlqʌtʲ
to loosen	(inf.) loosen, divide, sever, cut off

Ok fine another bonus sector for the long-rangers. They need some love too! I spoiled this already earlier but the correspondence table was shit. Here is a better version by Per.

PST	Proto-Uralic	Proto-Yukaghir	PY	Proto-Turkic	Proto-Lezghian
*ku-ni(k) sun day	*kaja *koja sun, dawn	*čajlə day light	*kʌ'n / *kʰʌ'n light	*kün day, sun daytime	*p:ak:a(j) (päivä+kajo = day + light) morning
Finnish sarastaa to dawn	P.-Inuit-Yupik-Siren. *qaru dawn	Tundra Yukaghir čajler- to dawn	PY *kʌnigʌ daybreak	(*kʌ'n light + igʌ day)	
Proto-Finnic *varahainēn early			Proto-Turkic *erte morning *yarin morning tomorrow		

Note how nicely PU & PYuk form their own branch of the tree and PST + PY + PT form another. Hee hee!

Where to put this??? Still thinking!

Sirenikski

qicəX 'morning'

Aleut

qila-X 'morning, dawn'

I JUST FOUND YOU, AND THIS IS CRAZY, BUT HERE'S MY METHOD, CALL ME BABY

After setting up PU, PYuk, PY, PT, PL, I went to check PST. My logic was: "If I am right it should begin with a "k". Test of theory part MCMXCIII - open wiktionary Proto-Sino-Tibetan-Lemmas, start from the beginning." AND THERE IT WAS HALFWAY DOWN THE LIST
===== %D This is why I do this stuff! Aaahhhh!

Time to go sleep now, I hope you can read Finnish. Hee heeeeeeeeeeeeeeeeeeeeeeeeeehhhhh!

Fortescue 2018:

*nuʏe-/ nʼuʏe- ‘rise (sun or moon)’

pu – [note Fin. nouse- ‘rise’]

ps –

PYuk *nug- ‘light, day’ [Omok forms only in Nik. 2006]

pe *nuʏə- ‘appear, rise (sun)’ [and csy niruʏ- ‘be light, daylight’, Sir.

nurəX ‘moon’, nurə- ‘illuminate’, but also jərcəʏə- ‘bright’. There

appears to be contamination with PYup *iraluq ‘moon’ in Yupik (in

turn related to csy niruʏ-)]

Al tuʏiða-X ‘moon’ NOTE HOW INTERESTINGLY THIS ALSO HAS A T- AT THE ANLAUT.... LIKE THE ESTONIAN...

				*tarvan	Finnish	tavara			
			*tarvan		Proto-Finnic	*tarbiccē-	to need		

It all started on a chance encounter with starlingdb.org. I was doing some late-night historical research, blissfully unaware, when I found the site. “Nice?! And what a classic look! I’d better go check - these guys do no waste time on fucked-up bling, stalking users with cookies, and UI/UX meetings.” I thought and ventured in, browsing some words in North Asian languages. Then, I spotted this:

Proto-Yenisseian: *ʔɔksi (~x-)

Meaning: tree

Ket: ɔkś (Imb.)

Yug: oksi¹

Kottish: atči, *atče; (Бол.) ачи; acc. ачи (М., Сл., Срсл.), ач (Кл.)

Arin: ošče (М., Сл., Срсл., Кл.) "wood"; kus-ošče (М., Сл., Срсл., Кл.) "tree" (lit. "one tree"); otši (Лок.) "tree, wood", otšil "tree"

Comments: CCE 198. The Pump. form oksi (Срсл., Кл.) is in reality Yug. The key to the etymology is probably the Kottish paradigm: atči 'tree', plur. ak / ax, āx. The plural form here undoubtedly reflects PY *xaʔq 'tree, wood' (q.v.). One can therefore suppose that PY *xɔksi is a transformation of the original compound *xaʔq-sV or *xaʔq-xusa, lit. "one tree" (a compound analogous to *de-s 'eye' etc.) - cf. a similar later formation in Arin kus-ošče. The transformation of vocalism, however, is still to be explained. Werner 2, 50 <*(x)oksi / *(x)otsi>.

“Hmm! Heh heh, what a funny coincidence.”. And of course, only Finno-Permic people can appreciate this. “I wonder if I’d better run some words thru this database... what would I sense and think if I were transported back to Neolithic? Hmm.” But already, on the same page with “tree”, I instantly found

Proto-Yenisseian: *pōj

Meaning: fir tree

Proto-Yenisseian: *χV-ut-

Meaning: to climb (a tree, a mountain) (quite close to “kavuta” for you non-Finnish)

Proto-Yenisseian: *rəʔə (~-G-, -χ-, -p-)

Meaning: hoarfrost (on trees) (“riite”)

Amused, I thought “Perhaps it is sleepytime because these perceived connections are a bit too easy to find.” but continued instead. After a brief Neolithic RPG session with me & myself and also as a recent father, I found

Proto-Yenisseian: *sūli

Sino-Caucasian etymology: Sino-Caucasian etymology 

Meaning: hook (for a cradle)

Ket: súl⁴ (South.), North. sú:le⁴; pl. súln⁵

Yug: suʔl // su:^hl, pl. suləŋ⁵

Kottish: šūli, *šūle(i), pl. šūlaŋ, šūlān "Haken"

Comments: CCE 279. Werner 2, 213 <*suʔələ>.

And stared at the screen for a while. I did not even have to headstand to see it. It was there, phonetically almost a perfect match, with the meaning similarly off akin to “oksa”. Like a side cognate (if there were not a term before, there is now 8)). I spent a few hours in the database, completely off track from my previous quest.

Proto-Yeniseian: *kuł- (~ *g-)

Meaning: to slide down, to ski

kulkea / liukua

Proto-Yeniseian: *p[u]GVm-

Meaning: soft

pehmeä

Proto-Yeniseian: *pōqe

Meaning: deep

pohja

Proto-Yeniseian: *pɔʔɔle

Meaning: fat

pullea / pyylevä

Proto-Yeniseian: *pəl-se-

Meaning: to sew

parsia

Proto-Yeniseian: *poʔq

Meaning: excrements

paska

It was obvious that this shit needed more research. Next day, an article “Proto-Yeniseian Reconstructions, with Extra-Yeniseian Comparisons” - Sergei A. Starostin and Merritt Ruhlen. Uralic was mentioned nowhere, of course, but the angle was interesting. I thought “Hmm yeah you guys can go south. I have something else in mind. Let’s see if we can make a full circle, thanks for the tip!”

ALIVE *÷e÷te

ARMPIT *qoʔ-

BOIL (v.) *÷ëqan

CRY/SHOUT *(h)uxä-

DIE/DEATH *qò-

DRY *qäj-

EAT *siG-

just browsing for the lulz. “Not bad”, I said aloud to myself. “I need *more*. Where is my next fix?”

It was “Annotated Swadesh wordlists for the Yeniseian group (Yeniseian family).” by G. Starostin.

8. BLACK Proto-Yeniseian *tum- (1) Finnish: tumma

13. CLAW(NAIL) Ket îṇʸ {инь} (1), Yugh iḥ:nʸ (1), Kott halči:g ~ halčix (2), Proto-Yeniseian *ʔi:ne [*xi:ne] (1). Finnish: kynsi

14. CLOUD Ket 'asʸpulʸ {асьпуль} Finnish: pilvi

15. COLD Arin: Dulzon 1961: 187 (M., Dict., Pal., Kl.). Cf. also šil-tʷu 'it is cold', šil-tu 'cold (n.)', maybe also sol-ma 'frost' (Kh.) [Werner 2002: I: 162]. Finnish: kylmä

and then

22. EARTH Proto-Yeniseian *baʔŋ (1). Finnish: maa

I dropped the keyboard.

“ALL RIGHT NOW WHAT IS THIS?? WELL FUCK ME AND MARRY ME YOUNG. TIME TO GET SOME DICTIONARIES AND ALSO CHECK WHAT I ATE LAST NIGHT.”

(not only because

23. TO EAT - Ket $s\hat{1} \sim s\hat{y}$ {сий} (1) / =a ~ =0 (2), Yugh $si^h:y$ (1) / =a ~ =0 (2), Kott to:p-a:k-ŋ (3), Arin šau (1), Pumpokol sogo (1), Proto-Yeniseian *si:- (1). Finnish: syödä

whispered “Hey!!! What about me?? I was the next in line!!!”)

It turned out last night was fine and also others could see the row

22. EARTH Proto-Yeniseian *baʔŋ (1).

Fortunately, 23. was placated when I told it that I already knew it because we had met earlier. “Oh right! You mean THIS party?” it said. Confused, I continued on my digression.

After plumbing starlingdb.org, it was obvious that for the time being I had exhausted the Internet of easily available Yeniseian material. Getting physical dictionaries, on the other hand, was a bit difficult, since there were none existing – apart from a recently published “Comparative-Historical Yeniseian Dictionary” by Edward J. Vajda and Heinrich Werner. “What luck!” I thought. They were ~300 euros a piece. “So unlucky!” I thought. But there was one set of the books in an university library in Finland, because in Finland (for the most part...!) we think education is sexy.

Nobody knows beforehand what exactly will happen if the whole population gets a decent education. Some people that know better can of course self-importantly always ask “But, after all, what use is it?”, because ironically they do not know that the answer is “Why, sir, there is every probability that you will soon be able to tax it!”. But better not give *those* kind of people any ideas – they might have an unforeseen reaction to new things.

Finally, I had the books I needed. Thank you Finnish library system! I dove into a world of forgotten languages and for a native Uralic speaker the experience was perhaps the same as with the first native Indo-European speakers finding linguistic connections across the globe. I did not even have to jump through any scholarly IE hoops like

Borrowing from an *adstrate*... or Lallwort?

Borrowing from an *adstrate*... or Wanderwort?

Borrowing from an *adstrate*... or vrdhhi gerundive of an otherwise completely unattested stem?

I could just read stuff and later in the day or the next, or after a few weeks (or months...!), understand the connection. Some were obvious. Some were elusive. And some were not there after all. But let me tell you there were and are *plenty*.

Rather interestingly, scholarly FU hoops like

Etymology unknown... or onomatopoeic?

Etymology unknown... or sound-symbolic?

Etymology unknown... or borrowing from Proto-Germanic, but PG word lacks any PIE connection?

were useful to me as “Handy lists of words to check because obviously Finnish is so connected to universal truth that many words sound like the words really ARE in the idea world”. Especially amusing were a general class of “Words relating to winter, survival gear e.g. sleds, or natural phenomena, borrowed from Proto-Germanic”, of course, since those Proto-Germanics are unquestionably the top 1 ancient culture of winter handypersons. If they did not exist, the whole historical Indo-European dominance across every technocultural spectrum imaginable would have a

gaping omission in the postulated skill set! What a disturbing thought. Good that there is a culture that fixed this already over 2000 years ago.

Don't get me wrong, I love those southern weirdos as much as the next Germanic substrate hypothesist (hee hee) but have the linguists making these connections ever looked on a map combined with some weather data for past millennia??? Even my trusty German car *does not have mud flaps as a default* because who needs them in Germany, right? If I were in Germany and wanted to drive in shit, I would have to ram my car through the doors of a water purification plant. In Funland, this is achieved by going to buy everyday groceries.

I don't mind because the late PIEs told us that "Shit is good – you can grow stuff in it and then you can eat it – *no not like that!!!*" and eventually we got the hang of it. But why would they tell us a secret like that? Maybe they have an agenda and Proto-Sámi were right after all... but I digress again. Better paste some more "coincidental homonyms" because I heard it is practically impossible to have many of them betwixt unrelated languages. Everything counts in large amounts. More later when I have cloned myself so I have more time, ffs!

2026 05 14 P.S. I just noticed that subconsciously I have followed the closing sentence from Vajda, Feb. 2012 "Maybe the best way to demonstrate a language family is not to try so hard.". WEIRD AF SINCE I HAVE NOT READ THAT SENTENCE UNTIL TONIGHT, TONIGHT?++

Group "THICC"

Group "ALLRIGHT ???????? LET'SDOTHIS WATTEFUK PGer ETYMA SUGGS"

First, some general points:

1) The Proto-Finnish was supposed to be phonetically WERY GONSSERVATIBGE!
PG *kuningaz, PF *kuningas! The PF speakers will not drop word-final "-s" or "-z" just because someone wants to make an etymological "connection"! Neither will they pop up some extra vowels and crap like that!

2) The anlaut cluster reduction in borrowings to Uralic languages

IS NOT OPTIONAL

CHERRYPICKING IS NOT ALLOWED TO FIND YOUR FAVOURITE!

ONLY THE FINAL CONSONANT REMAINS FROM THE CLUSTER

ALL OTHERS ARE GONE GAME OVER I TELL YOU NOTHING MORE TO SEE!

Examples: Hypothetical borrowing of the Proto-Germanic word

***strangaz** to Proto-Finnic:

***sankka?**

***tankka?**

***rankka?**

ONLY *rankka IS A POSSIBLE COGNATE! ALL OTHERS ARE NOT!

Remember ppl? Someone said: "SOUND LAWW GNOWS NO EGGXEPTIO!!!!"

From this, the following Proto-Germanic etymologies are false:

Proto-Germanic ***stakna-** Proto-Finnic ***sauna**

Not in a million years!!! Borrowed made-up word should be ***tauna**

Proto-Germanic ***stalpa** Proto-Finnic ***salpa**

No! No! It should be ***talpa** and there is no such word.

Proto-Germanic ***stangō** Proto-Finnic ***sanka**

N E G I T I V E! ***tanko** exists in PF, and could be from ***stangō**, but
***sanka** definitely is NOT from PG - even the last vowel does not match.

Proto-Germanic ***stapulaz** Proto-Finnic ***sapilas**

Bls stop this already... If anything, it could be ***tapuli** in Fin...

Proto-Germanic ***stauraz** Proto-Finnic ***sapra**

Of course it is acceptable to invent "sau" → "sap" and "Oh the final -s?
Well I guess it just went away on its own :-----D!" to try to fit this stuff...

Proto-Germanic ***starrō** Proto-Finnic ***sara**

There is even an etymology for a synonym ***tarna** from PG that could be acceptable! Why the need to try to get EVERY etymology from Indo-European??? Is it the c00lest language family across the globe???

Proto-Germanic ***stapaz** Proto-Finnic ***sata + *ma**

Oh, I see, the PIE people who traditionally were afraid of seas and oceans and who did not even have a common word for a FISH!!!! somehow levelled up after leaving their ancestral homeland and gave the concept of “harbor” to the Proto-Finnic... who did not have the concept before... I guess the PFs just left their wooden rafts wherever and lost them frequently. I am so glad the Proto-Germanic brain power as evidenced by ingenious linguists solved this for us.

Proto-Germanic ***stūraz** OR Proto-Indo-Iranian ***st^huHrás**

→ Proto-Finnic ***suuri**

It should be ***tuuri**... the PG word for “big” is ***stōraz** and the vowel does not match. A synonym ***stūraz** was invented so that the etymology could be made, but the German “stur” means STUBBORN and Dutch “stoer” means firm, robust, tough – they do not mean “big”!

and then... crème de la crème...

Proto-Germanic ***stija** Proto-Finnic ***sija**

... get real..... this one is gonna be manhandled in the following...

For starters, about the current etymology of “**sija**”... P-Ger ***stija** whence English **sty**? That’s nice.

Plot twist: Perhaps we Uralic people have cared about our non-plant domesticates so much that we used the word “**sija**” also e.g. when referring to a place in a barn where a specific cow sleeps? But of course, caring for non-human animals is a perverse thought in some frames of reference, so using “**sija**” with a non-human animal immediately leads to the conclusion “HE HE THE FINNISH OBV SLEEP WITH CATTLE AND SWINE LOL @ THEM!!!”. (No we don’t do that!! We just take the shit and... no wait... remove that...) Which is quite ironic, since as we know, e.g. the early European ~~explorers conquerors~~ mass murderers in the American continent did not get their resistance to *Orthopoxvirus variola* from their bath-enjoying and absolutely-not-cohabiting-with-various-farm-animals European ancestors. Heh heh! I am glad that the ***sija**-***stija** etymology was made by a Finnish guy so now I will move to something more constructive instead of continuing to flame:

Proto-Finnic *sija place, position bed	PKY *se’j seat, sitting place resting place
--	---

Proto-Samic *sējē place	PKY *se’j seat sitting place
--------------------------------------	--

Proto-Samic *siejtē altar stone, sieidi	PKY *se’j seat sitting place
--	--

(the P-Ger. etyma

Proto-Finnic	PY
*hei	*χeg-ja
hello, hey	name
and quite a bunch	
of Indo-European	
languages.... 8DD	

Proto-Uralic	Proto-Yukaghir	Tungus
*nime	*nime	*nime
name	house, yurt, family, to live somewhere	neighbour, household

Note how the word is exactly the same across 3 different “unrelated!!!” language families.

When the PIEs met Vuorean people, the Vuoreans greeted them with a hearty hello composed theoretically akin to this:

***χeg-ja & *nime?** Meaning “Your name & and your house / family / where do you live?”
So essentially “Name & surname / cognomen / nickname / whatever?”

In the following millennia (NOTE! WITH “nn”, NOT “n” - remember this as a great conversation starter at parties! You are welcome ;-----D!) the ancient logic of the greeting was garbled, and the meaning of the words drifted to **“HEY! & NAME?”** which have remained the same ever since! Coincidentally this means that the PIE borrowed the word for “name” from the Vuorean language and that is why it looks so similar... “Ὀμφρακές εἰσιν - happamia, sanoï kettu.” logic of the borrowing works both ways...

2026 06 04

AIGHT I was going to sleep but ass usual an inspiration overtook me. So good I could not wait to publish. For years I have pondered the connection "to throw / to give someone a lift". What is the maximum distance a human can be tossed??? Turns out it is indeed "across the river". SOGOOD!! 8DDDDD EnEjOy??!

Proto-Finnic	PKY
*heittä-	*thettes
to throw	ferry / cross over to the other riverbank

Finnish	PKY
heittää	*thettes
colloquial	ferry / cross over to the other riverbank
TO TAKE / TRANSPORT / GIVE SOMEONE A LIFT / RIDE	

Finnish	SK
etiäinen	qotät-ton
	1) foresight 2) to foresee

[False arrival](#), a kind of [premonition](#), for example one hears doorbell ringing although it doesn't, and soon it actually rings.

([Finnic mythology](#)) a [spirit](#) sent forth by a [shaman](#) or a person in great distress.

Finnish	PKY > Ket
eteinen	*qottan
entryway	front place in a tent area opposite the entrance
hallway	allan Ket anteroom

Group “WHYWOULDICHECKANYSPECIESNAMESIAMLINGUISTNOTABIOLOGIST”

(Special mention here to Irina Nikolaeva for her splendid collection of Yukaghir species names, and also to team Vajda + Dumgit, who actually checked species names because Dumgit escaped from boarding school as a six-year-old and hid in the forest and never went back! That’s a nice Northern way to deal with outside influence <3<3<3 if I share even one allele with Dumgit, I am forever genetically proud!)

Proto-Finnish *tärise- to shake to shiver to tremble	PKY *tʰeλ- morpheme in many words meaning push, shove	Hungarian ráz to shake	Proto-Yukaghir *l'ir-/l'er- to tremble / shake
---	---	-------------------------------------	---

Proto-Finnish *västärikko <i>Motacilla alba</i>	Kott tʰ·qta / tʰ·qt <i>Motacilla alba</i>	Hungarian barázdabillegető <i>Motacilla alba</i>	Kolyma Yukaghir jaqad-a.čən-pičči: <i>Motacilla alba</i>
--	--	---	---

Remove the first syllable from Proto-Finnish & Hungarian, and repalatalize K-Y:

*tärikko	*rázdabillegető	*l'aqad-a.čən-pičči:
*täri-	*ráz-	*l'aq-

Then. all languages have their respective word for “to shake” in the species name, right after the first syllable. And yes yes, I know “But it’s from *barázda*!! or It’s from Yakut!!!” - are those really the only etymologies existing ;)?

Yeniseian family has the same linguistic logic in the name of this sweetbird:

“*Motacilla alba* = an animal that shakes or pushes something.” (And no, wagging does not qualify as shaking >:P it must be TREMBLING sort of shaking, as these words show!)

Here we see again that usually PKY / Kott / Ket / **q**/ inside a word corresponds to Proto-Finnish /**r**/, as demonstrated earlier. By replacing these, the Kott word is

tʰ·rta / tʰ·rt

and to my Finnish ear, **tʰ** sounds enough like an ä/ö/y that the Proto-Finnish form is with “tär/tör/tyr” and not “tar”. Even the PKY morpheme corresponds to words in Finnish like

tyrkätä

to prod, push, nudge

to shove, thrust

törkätä

to jab or poke once

törmätä

to collide with, crash into, impact

From törmätä, we get to the next correspondence from this group of sweeties:

Proto-Finnic *termä steep bank (edge of river or lake)	PKY *tʰu· concave portion of riverbank
---	---

And did I mention that the etymology for the Proto-Finnic word is

“Cognate with [Proto-Samic](#) **tearmē*, suggesting earlier **termä*; further origin unknown.”

Quite the goisndniicensde!

Group

"SORRYPROTOGERMANSITISACTUALLYFROM: _PREGREEK_HMM_HEY_WTF!?!?"

Proto-Finnic	PY
*kauppa	*qʷapʰa / *qʷpʰa
trade	trade
commerce	to trade
goods	to sell
merchandise	

(I spoiled this in the beginning... remember? Older than... and there is more!)

Proto-Finnic	PKY
*nakra-	*diaʰqa
to laugh	laugh (inf.)

Finnish	PKY
narrata	*diaqqat
to fool, cheat, kid	to ridicule, make fun of
(lightheartedly)	from *dlʷasinj 'be happy' so the lighthearted-element is present

Suggested Finnish etymology - Proto-West Germanic - *narrō "a fool" of course has an unknown etymology.

Finnic	PY
eh̥ta	*aqt̥a
genuine	good
pure	well, beautiful
<i>echt... 8D who borrowed</i>	
<i>whom... just asking for a friend...</i>	

Finnic	PY
ah̥kio	*aqt̥ia:ŋsu:l

Next pageZ: Uralic and Yenisean languages are related. Bold claim!! Even bolder claim: The connection can be found via Hungarian / Kamassian / Mator / Nganasan – a missing linkz0rz. Check out the “irregularities” which again are just sound laws that nobody has bothered to find out because everybody knows that they are not related at all. Also Fortescue was right, all North is related. Just you wait when I get all my stuff online. Prolly Ainu, Japonic, Tungusic, Turkic, Mongolic, Nivkh, Chukotko-Kamchatkan etc. can be definitely connected to the mix. Some of those featuring in the SKIN part.

Sorry for the shit layout. I will make it better when I have some time as if I ever had that luxury. Prolly you can still make out the details. Tip: screw the numerals and other stuff developed for shallow Proto-Indo-European time depth. This stuff is thousands of years older. So it is quite ironic that I am writing this in English?!11+1?!

And of course this means that Uralic languages are also distantly related to Northwest American languages. Eeehhh! What could be cooler??+++!!?+ fine, probably this
<https://www.nature.com/articles/s41586-023-06557-9>

Ooh nice I finally managed to flip the orientation!!!! Sad that I do not have the time to update this “HOT CONTENT, SHIT DELIVERY”-style table!”

First things first:

I GOT WOOD

PY *-as ordinal suffix

PFinnic *-nci ordinal suffix

PY *-ç singulative suffix

Finnic -s saapas, kives, oras

You are welcome, I hope.

First regular sound change (I have a ton but try to find some yourself, it's quite fun 8))
 (Well ok the *first first* here is **PU /m/ == PY /b/** but Vajda said already in 2024 “*Though nasals were absent word-initially in PY, morphophonemic evidence suggests word-initial *m and *n became *b and *d at an earlier stage of the language.*”. Luckily for me he did not posit that the language mentioned is the ancestral language of both Uralic and Yeniseian languages.)

Tee hee! And while I am at this, the **PU *minä & PY *bin** are of course quite close to **PMongolic *bi** and **PTungusic *bi** and **PTurkic *be**. But more about that later. But at this time, hello to all of you my ancient linguistic family friends who were thought to be impossible!! Remember to mail me if you wanna support my research and let's rewrite some history!

2nd regular sound change: Anlaut: **PU /p/ == Hungarian /f/ == Kamassian /pʰ/ == Nganasan /x/ == PY /xʷ/ == Proto-Na-Dene /xʷ/.**

Beat that!!! Oh ye, Hungarian **nap** comes from this: Ancestral form (PU/PY) ***paj**, whence ***pan**, whence metathesis = **nap**. The “unknown substrate languages” in all Uralics are words inherited from the proto-language of Uralic & Yeniseian. I call it Vuorean at the moment because mountains are c00l. A new etymology for **βοπέας** will also naturally come when I have time. Yeah right.

Nganasan irregularities, strange stuff in pronouns of Samoyedic languages etc. are just inherited words from the mother language of both Proto-Yeniseian and Proto-Uralic. Prolly Altaic “Sprachbund” is also a product of Yeniseian mixing with some different language versions arriving back from North America, since there is lots of Yeniseian stuff in Proto-Turkic, Proto-Mongolian etc... What? I should prove this also? All right, I guess it is up to me as usual to do everything. Take note that Proto-Permic ***ar** & Proto-Samoyedic ***erö** prolly come from: ***šeĵg-xʷaj → ejgraj → egraj → *ar + *erö**.

Proto-Uralic

fur

skin

(probably the Ket word means “birch bark skin” or something akin to that)

***qur-l sabot**

***śopa**

***kopa**

in NA

clothing

clothing

skin

ACROSS
BERINGIA

Sotisopa original meaning smth

like “war skin”

or “war fur”

2-point armor in Neolithic

not a bad idea amirite?

Proto-Japonic

***kapa**
skin
bark
hide

Ainu

kapuhu
skin
bark
peel

Finnic
sotisopa
war
gear

A few more for the road:

Finnish:

kuolettaa to kill (archaic) kieli tongue, language

Proto-Yukaghir:

2053. *qo:ləw-

T qoolew-, quolew- to kill

Burushaski:

qhúun -t-

№	English	Siouan languages					Pawnee	
		Yankton- Yankton					(heur)	
		Lakota	Santee Dakota	Sisseton Dakota	ai Dakota	Osage	Tutelo	Crow
	110 to kill	kté	kté	kté	kté	ʔs'éthe	kite, la(ka)tskih a	dappeé kuutik

78 [tongue](#) [čheží](#) [čheží](#) [čheží](#) [čheží](#) őéze nechi, lechi déeshi haátu'

Crow – dappee & Finnish – tappaa, curious!

Proto-Yeniseian:

*qo: < *qo'ʌ / *qoɣʌ < *qagʌ

PY (S) *qõɣV (~ ɣ-,ɔ-, -ɣ-)

to kill

HAIDA

k'ut'álgan to kill KÍL tongue, language

Since you came all the way here, take a looksie:

Finnish

Etymology

From the instructive form of the second infinitive of [maata](#) (standard [maaten](#)).

Pronunciation

- [IPA](#)^(key): /'ma:te˞/, ['ma:te(?)]
- Rhymes: [-a:te](#)
- Syllabification^(key): maa-te
- Hyphenation^(key): maa-te

Adverb

maate ([dialectal](#), [Southwest Finnish](#), [Satakunta](#), [Kymenlaakso](#), [Central Ostrobothnia](#), [South Karelia](#))

to [sleep](#), to [rest](#)

But, if it instead is an ancient compound of
maa + te

“earth + animate subject lies in a horizontal position” it would make total sense.

Where to get that suffix??? I NEED IT!!! Luckily, Vajda has already discovered it:

[*-tej](#) (“to lie in a stationary position”) (for one or more animate subjects)

While we are here, lying in a horizontal position, let’s also grab something to make us more comfortable.

Proto-Yeniseian:

***tejl** (plural [*tejl-Vŋ](#))

1. ([architecture](#)) [mat](#), [tent flooring](#); [bedding](#)

Composed of **[*-tej](#)** + **[*-l](#)** (instrument suffix).

Now, I wonder what that would sound in Finnish? **TEJL**? But we cannot have clusters like that in Finnish. Let’s metathesis instead. **TELJ**? And we cannot end words like that. Let’s add an A, it is the simplest vowel anyway. **TELJA**? Sounds a bit wrong, still. **TALJA**? Aah! There it is! So nice to lie on this “instrument of lying down in a horizontal position” as they would call it in Proto-Dene-Yeniseian <3 what luck that the -te also exists in North America with the same meaning!! I guess Vajda + others were totally right about the Dene- Yeniseian connection 8)

Proto-FinnicNoun

***talja**^[1]

1. [hide](#) (animal skin)

I'd Do Anything for Love (But I Won't Do That)

Since grammatical connections are the top of the tops, here are kinship words. A great sociobiological technology to reduce inbreeding, very useful in small populations.

PDY	* <i>lejn-ej</i>	‘son-in-law’;	PU	*wänew / *wänewe	
			PU	*miinä	
			PU	*pojka	
PDY	* <i>gaj-ej</i>	‘parent’s sibling’;	PU	*šečä	
			PU	*nejde	
			PU	*näjte	
			PU	*äjjä	
		‘parent’s elder sibling’			
PDY	* <i>web-ej</i>		P-Samic P-Finnic	*eanōj *tüttöi	maternal uncle

Note how in Proto-Uralic and some daughter languages, all kinship words have either -w or -j / -i in some form, except ***šečä**, but I will come to that later.

In Proto-Finnic, if we suppose “daughter”, *tüt'är, is a loan from an Indo-European language, the form *tüttoi should prove the kinship suffix was still partly productive at that point in time.

Must be a coincidence. More will follow. Get your Lotto sheets ready.

Fine, one more. Three “coincidental homonyms” betwixt Yukaghir and Finnic! What are the odds! Mechanism in short: debuccal. in PYuk, j ↔ g, metathesis, first vowel rises a-u. CU again soon<3

Proto-Yukaghir

**öyur*

K ugur **spine, ridge**; KJ ugur

K ugurčə **ski with fur on the bottom**; KJ ugurče; SD ugurce; T ugurče foot; shoes, boots; TK ugurt'e + leg; TJ ugurče; TD ugurče, -uogurče

K ugurče: **grayling** (*Thymallus*);

Proto-Finnic

harjus* **grayling (*Thymallus thymallus*)

harja* **mane / bristle / crest, comb / brush / ridge (of a roof, a hill)

(Yes I know, “Borrowed from Proto-Baltic”. but I would not bet on it any more... ;P)

Swadesh lists are useful and the concept is nice, especially considering that Wikipedia says “The Swadesh list was put together by Morris Swadesh on the basis of his intuition.”. Hee hee! What an awesome dude <3

He worked mostly in the warmer regions of the world, including tropics. Lucky chap! Now I do not want to nitpick but the list shows some preference to non-colder regions of the world.

This presents certain challenges in using regular Swadesh lists as tools in comparing the more northern languages. As a amusing side note, the new and sexy Leipzig–Jakarta list to test the degree of chronological separation of languages *does not even have the word “cold”* in it, whereas when I go to Wiktionary’s https://en.wiktionary.org/wiki/Appendix:Proto-Uralic_reconstructions I can get 23 hits on the page with the word “snow” alone. I reckon this is a sufficient demonstration that a new Swadesh list fine-tuned for north would be useful, or at least it is understandable when I say that I’d better make one instead of continuing to complain here... Up and coming next! SeeY’All!?

~~Edit: Next time, Swadesh indeed, about 50% cognates, beat THAT!~~

Edit 2:

Proto-Finnic *peeni PY *pʰʌna / * pʰʌnʲa = small in both!

If that did not confuse you, the regular Swadesh is on the next page, I managed to landscape it also! Much tech skill! I have more Swadesh cognates but I have 0 time to format them now.
